VEGETABLE SEEDS.

Please notice that our prices are quoted at the lowest New York figures, and do not include the prepayment of express or postage charges. If postage is to be prepaid, add 8 cents per pound.

See inside front cover of this Catalogue for complete assortments of Vegetable Seeds of approved and choice sorts for from \$5 to \$25.

ASPARAGUS.

ASPERGE. *Esparrago.* Spargel.

CULTURE.—Sow the seed thinly in rows 1 foot apart in April or May (4 to 5 lbs. to the acre), and keep down all weeds. To secure strong, healthy plants, thin out the seedlings to 3 or 4 inches in the rows, saving only the strongest. The 1-year-old plants should be set out in spring, in a rich, sandy loam, dug 18 inches deep, into which has been worked plenty of well-rotted manure. If a stiff clay soil is all that can be had, add plenty of sand and sifted coal ashes to loosen it up, and also see that it is well under-drained. In planting for private use, set out in beds 5 feet wide, three rows in a bed, the outer being each 1 foot from the edge, and allow 12 inches in the rows; set the plants at least 6 inches below the surface. If set out in autumn, top-dress with 6 inches of manure. For market on a large scale, set out 4 by 1½ feet.

Every fall a good dressing of coarse manure should be applied after the tops have been cut, and in the spring forked in. Never cut too closely. The roots need the benefit of some foliage during the year, else they will weaken and die.

ASPARAGUS.

		Per oz.	¼lb.	Lb.
15	Colossal. The most approved and standard sort. The famous <i>Argenteuil</i> of the French is identical with it.....	\$0 10	\$0 20	\$0 50

18	Columbian Mammoth White. A variety producing large white shoots.....	10	25	75
	Two-year-old roots.....	per 100, \$1; per 1,000, \$7..		

ARTICHOKE.

ARTICHAUT. *Alcachofa.* Artischocke.

CULTURE.—Deep, rich, sandy loam, with plenty of well-rotted manure. Sow seeds in April and May, and when large enough transplant into rows 3 to 4 feet apart and 2 feet in the rows. They reach maturity the second year. When cold weather sets in bank the earth to the top, first cutting off and tying up the leaves so that they will occupy less space, and in spring fork in a dressing of manure. Artichoke may also be treated as an annual by sowing the seed in hotbed during February and transplanting in May. The heads should be cut off and used as they get ready. If left to ripen on the plant they will exhaust it, and no more will be produced that season. Heads are unfit for culinary purposes after the flowers expand.

FRENCH ARTICHOKE.

BEANS.

As a farinaceous food for man, the Bean is considered far superior to any other legume, and next in importance to wheat. The modern varieties leave little to be desired; the great care given to their improvement has resulted in many superior sorts, greatly extending the season of use, as well as varying the quality of flavor.

THORBURN VALENTINE WAX BEAN.

CULTURE.—About the first of May select a warm, dry, sheltered spot; dig and manure slightly; make drills 2 inches deep and 18 inches to 2 feet apart; drop the Beans 3 inches apart in the drills, and cover not more than 2 inches deep. Hoe well in dry weather to keep down the weeds. Sow every two weeks for a succession.

DWARF WAX BEANS.

30 Thorburn Valentine Wax. First in earliness, first in productiveness, and first in quality. A perfect Valentine Bean, with wax pods. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.

31 Thorburn Refugee Wax. A perfect Refugee, with long, round, yellow wax pods. Suitable for early or late sowing, and an immense yielder. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.

		Per qt.	$\frac{1}{2}$ pk.	Pk.	Bus.

THORBURN PROLIFIC MARKET BEAN.

DWARF LYONNAISE BEAN.

ENGLISH DWARF BEANS.

FEVE DE MARAIS. *Haba.* Große Bohnen.

CULTURE.—Sow in drills 2 feet apart, as early in the spring as the ground can be worked (these are as hardy as Peas), in order to get them into pod before the heat of summer. When in pod break off the top of the plant to check the growth. Plant and hoe same as for Dwarf Beans. A strong soil suits them best. These Beans are eaten shelled.

	Per qt.	½pk.	Pk.	Bus.
106 Early Mazagan. The earliest of this class.....	\$0 25	\$0 75	\$1 25	\$4 50
108 Broad Windsor. The largest and best of the class of English Dwarf Beans .	30	90	1 50	5 50
109 Sword Long Pod. A size smaller than Windsor....	25	75	1 25	4 50
110 Green Windsor. A green "Long Pod".....	30	90	1 50	5 50
112 Small Horse Bean. Half the size of Mazagan....	20	60	1 00	3 50

POLE OR RUNNING BEANS.

HARICOTS A RAMES.

Frijole de Bejuco.

Stangen-Bohnen.

CULTURE.—Sow as the soil becomes warm and dry, from the first part of May (for all except Limas) to the latter part of May, in hills 4 feet apart each way. Limas should not be planted until warm weather has fairly set in. One quart of Limas will plant about 100 hills, allowing four or five Beans to a hill, and of the smaller sorts about 200 hills. Poles 8 or 10 feet long should be firmly set in the center of the hills before putting in the seed.

- 114 **Lima, Challenger.** Thick and productive; the best of all. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.50.
- 115 “ **Large White.** Largely grown and highly esteemed. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.50.
- 120 “ **King of the Garden.** Large in pod and Bean. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.
- 124 “ **Dreer.** Thick, and of fine quality. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.50.
- 126 “ **Early Jersey.** Matures earlier than the large Lima. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.50.
- 129 “ **Small White, or Sieva.** Very productive sort. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.50.
- 132 **Horticultural, or Speckled Cranberry.** Good as a Snap or as a Shell Bean. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.
- 133 **Speckled Cut-Short, or Corn-Hill.** Used for planting among Corn. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.
- 134 **Dutch Case-Knife.** Pods long, green and flat; can be either snapped or shelled. Qt. 30 cts., $\frac{1}{2}$ pk. \$1, pk. \$1.75, bus. \$6.50.
- 135 **Southern Prolific.** A continuous bearer; of good quality. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.
- 136 **Scarlet Runner.** A popular English Pole Bean; very ornamental. Qt. 30 cts., $\frac{1}{2}$ pk. \$1, pk. \$1.75, bus. \$6.50.
- 138 **Tall July Runner.** Earliest of all Pole Beans; medium height, extremely free-bearing, round green-pods, stringless; small, white kidney-shaped Beans. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.
- 143 **White Dutch Runner.** Same habit as the Scarlet Runner. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.
- 144 **Kentucky Wonder (Old Homestead).** Pods green, very long; very prolific. Qt. 40 cts., $\frac{1}{2}$ pk. \$1.50, pk. \$2.50, bus. \$9.
- 162 **Black German Wax.** Yellow pods. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.
- 165 **Flageolet Wax Pole.** Large, yellow, stringless pods. Qt. 40 cts., $\frac{1}{2}$ pk. \$1.50, pk. \$2.50, bus. \$10.
- 173 **Mont d'Or.** Early, productive; golden wax pods. Qt. 35 cts., $\frac{1}{2}$ pk. \$1.25, pk. \$2, bus. \$7.50.
- 179 **French Yard Long.** Pods sometimes grow from 2 to 3 feet long, and are very slender, like a pipe-stem; very curious; should be grown on pea brush. Per $\frac{1}{2}$ pt. 25 cts.

POLE LIMA BEANS.

BURNET.

BORAGE.

The young leaves of this annual, which smell somewhat like a Cucumber, are used as a salad, or boiled like Spinach. Should be sown at intervals, as the leaves are palatable *only when young*. Sow in the spring, in light soil; transplant in shallow drills, a foot apart, when of six weeks' growth.

	Per oz.	$\frac{1}{4}$ lb.	Lb.
183 Borage	\$0 15	\$0 40	\$1 25

BURNET.

PIMPERNELLA PETITE. *Pimpinella.* Pimpernell.

The leaves have a warm, piquant taste, and are useful for salads and soups. Sow early in the spring, half an inch deep, thinly in rows.

	Per oz.	$\frac{1}{4}$ lb.	Lb.
184 Garden	\$0 10	\$0 30	\$1 00

BEET.

BETTERAVE. *Remolacha.* *Salatrübe.*

CULTURE.—Sow as early in the spring as the ground can be worked (5 to 6 lbs. to the acre), and every two weeks after for a succession, up to the first week of July. For general crop sow about the middle of May.

The soil should be light, sandy loam, well enriched with stable manure, and plowed and harrowed until very fine. Sow in drills 1 foot to 15 inches apart, and when well up, thin from 4 to 6 inches. The young Beets pulled out of the row are excellent used as Spinach.

- 188 **Early Flat Turln.** Very early, round, deep blood color, tender. Oz. 10 cts., $\frac{1}{4}$ lb. 25 cts., lb. 75 cts.
- 190 **Detroit Dark Red Turnip.** Fine round shape; skin dark blood red; flesh bright red, very tender and sweet. Oz. 10 cts., $\frac{1}{4}$ lb. 20 cts., lb. 60 cts.
- 191 **New Crimson Globe.** Fine globular shape; flesh rich deep purple, fine quality. Oz. 10 cts., $\frac{1}{4}$ lb. 25 cts., lb. 75 cts.
- 192 **Extra-early Egyptian.** Very early, and of dark blood color; rather flat in shape. Oz. 10c., $\frac{1}{4}$ lb. 20., lb. 50c.
- 193 **Crosby Egyptian.** Extra early, round, dark red. Oz. 10 cts., $\frac{1}{4}$ lb. 20 cts., lb. 50 cts.
- 194 **Extra-early Eclipse.** Very early; round-rooted and bright red. Oz. 10 cts., $\frac{1}{4}$ lb. 20 cts., lb 50 cts.
- 195 **Electric.** Extra early, nearly round variety; bright red color and fine table quality. Oz. 10c., $\frac{1}{4}$ lb. 20c., lb. 50c.
- 196 **Lentz Extra-early Turnip.** A large, small-top, round Beet; light red. Oz. 10 cts., $\frac{1}{4}$ lb. 20 cts., lb. 50 cts.
- 197 **Dewing Early.** Of fine form and flavor, and good for market. Oz. 10 cts., $\frac{1}{4}$ lb. 20 cts., lb. 50 cts.
- 198 **Bastian.** An early, light-colored turnip Beet; good. Oz. 10 cts., $\frac{1}{4}$ lb. 20 cts., lb. 50 cts.

		Per oz.	$\frac{1}{4}$ lb.	Lb.
199	Columbia. A round, smooth-skinned variety, with deep blood-red flesh; it is very early and of the finest quality.....	\$0 10	\$0 20	\$0 50
213	Edmand Blood Turnip. A market-gardener's strain of great regularity in shape, and very dark flesh of best quality.....	10	20	50
214	Early Blood Turnip. Dark red, and of fine flavor; good for winter.....	10	20	50
215	Bassano. Early; light color.....	10	20	50
224	Half-long Blood. Fine dark strain, for winter.....	10	20	50
226	Black Queen. Very dark, half-long roots; leaves almost pure black.....	10	20	50
230	Victoria. Metallic red foliage.....	15	35	1 25
232	Dell. Black-leaved.....	15	35	1 25
234	Long Smooth Blood. A good late variety for winter.....	10	20	50

FOLIAGE BEETS.

Kinds of which the leaves only are used; very ornamental.

		Per oz.	$\frac{1}{4}$ lb.	Lb.
247	Scarlet-ribbed Chilian	\$0 20	\$0 35	\$1 25
248	Yellow-ribbed Chilian	20	35	1 25

252	Scarlet-veined Brazilian	20	35	1 25
253	Dracæna-leaved	20	40	1 50

Grown exclusively for their handsome foliage.

MANGEL-WURZEL, SUGAR BEETS, ETC.

Runkelrüben.

CULTURE.—As all Mangels require a deep soil in order to grow well. plow and subsoil at least a foot to 18 inches, and apply plenty of rich stable or Thorburn's Complete Manure. Sow in May or June (5 to 8 pounds to the acre), in rows 18 inches to 2 feet apart, and thin to 8 inches in the rows. Young plants may be transplanted to fill up vacancies. Sow in addition, when the plants are 3 to 4 inches high, at the rate of 200 lbs. Complete Manure, 200 lbs. bone flour, and 400 lbs. salt per acre. As soon as frost occurs, dig the crop. But in order to be well preserved for gradual consumption during the winter, Mangel-Wurzels should be heaped to a height of perhaps 6 feet, on a dry, sloping situation; cover at first with a piece of canvas, and as the cold increases this should be replaced by about 6 inches of either salt-hay, straw, sea-weed, or corn-stalks. Lest this covering be

GIANT YELLOW INTERMEDIATE
MANGEL-WURZEL.

displaced by the wind, a light layer of earth is necessary. As soon as this surface soil becomes frozen, about 6 or 8 inches more of earth should be placed over the entire heap. By following up this gradual process of covering, all danger of heating will be obviated, and the roots will keep in perfect order. Sow from 5 to 8 pounds to the acre.

MANGEL-WURZEL.

	Per oz.	¼lb.	Lb.
262 Mammoth Long Red Mangel-Wurzel. Very large, selected strain; 10 lbs. and over, @ 25 cts. per lb.....	\$0 10	\$0 15	\$0 30
265 Yellow Ovoid Mangel-Wurzel. Of distinct shape; one of the most productive sorts. 10 lbs. and over @ 25 cts. per lb.....	10	15	30
270 Golden Tankard Mangel-Wurzel. Bright yellow; handsome and sweet, and very productive. 10 lbs. and over @ 25 cts. per lb.	10	15	30
272 Giant Yellow Intermediate. A very large, yellow sort. 10 lbs. and over @ 25c. per lb.	10	15	30
274 Red Globe Mangel-Wurzel. Similar to the Yellow Globe; productive. 10 lbs. and over @ 25 cts. per lb.....	10	15	30
276 Yellow Globe Mangel-Wurzel. Large and productive; keeps well, and is relished by stock. 10 lbs. and over @ 25 cts. per lb...	10	15	30
278 Orange Globe Mangel-Wurzel. Similar to the above, but of a deeper, richer color. 10 lbs. and over @ 25 cts. per lb.....	10	15	30

SUGAR BEET.

KLEIN WANZLEBEN IMPROVED SUGAR BEET.

In view of the increasing interest in the culture of the Sugar Beet, we have had grown for us, under the direction of men of long experience, a supply of the very choicest seeds of several highly improved varieties. On application we shall be pleased to mail circular giving directions for their culture. We recommend 20 to 25 lbs. of seed to the acre. We offer them, so long as unsold, at the following prices:

	1 to 5 lbs. per lb.	5 to 10 lbs. per lb.	10 to 25 lbs. per lb.	25 lbs. and over, per lb.
280 Klein Wanzleben	\$0 30	\$0 25	\$0 20	\$0 18
281 Klein Wanzleben Improved	40	35	30	20

284 White Imperial (<i>best for poor soil</i>).....	30	25	20	18
286 White French. Very large; for feeding stock.....	30	25	20	16

BROCCOLI.

BROCCOLI. *Brocoli.* *Spargelfoh!*

CULTURE.—Sow early sorts as soon as the ground can be worked in the spring, in shallow drills, drawn 3 or 4 inches apart. Plant out 2 feet apart each way when the plants are about 4 inches high. Cultivate the same as Cabbage, in rich soil. Use the same remedies for insect attacks as are recommended for Cabbage.

The following are sorts best adapted to this climate, and the only ones which succeed generally; they are excellent, and deserve much wider culture than is usual in this country. We recommend No. 307 as the most certain to give satisfactory results.

	Per oz.	¼lb.	Lb.
300 Early White	\$0 30	\$0 85	\$3 00
301 White Cape	40	1 25	4 50

313 Purple Sprouting	25	75	2 50
314 Veitch Self-protecting	40	1 25	4 00

BROCCOLI.

BRUSSELS SPROUTS.

CHOU DE BRUXELLES. *Berza de Brussels.* Rosenkohl.

CULTURE.—Sow in May, in the same manner as Cauliflower, and transplant in July, 1 foot apart in the rows, which should be 1½ feet apart. In gardens, both large and small, the Brussels Sprout is, without exception, the very best winter vegetable that can be grown. Not the least valuable point connected with the Brussels Sprout is that it is as hardy as the common Curled Greens. The common Cabbage is hardly enough in a young state, but when full grown and hearted, frost soon destroys the largest heads, which rot and fall to pieces. Not so the Brussels Sprout; being small and hard, it is not in the least affected by frost. The real Sprout is not much larger than a marble, and as firm and hard almost as the stalk itself. These are the sorts which cooks prefer. They strip off the outer covering, cook them whole, and serve them up artistically in that fashion. When cooked through and no more, such Sprouts melt in the mouth, like the tenderest Cauliflower, and are equally as good. If more widely known, the Brussels Sprout would be as popular as it is valuable; few people appreciate it at its full worth.

BRUSSELS SPROUTS.

CARROTS.

CAROTTE. *Zanahoria.* Möhren.

CULTURE.—Sow No. 323 as early as the ground can be worked; or, for late crop, until the latter part of July. For main crop, sow from the middle of May to the first of July. Thin out early crop to 5 inches in the row, main crop 6 to 7 inches; the rows 10 inches apart for early crop, 14 for main crop. Hoe often and deeply between the rows. Soil light, sandy loam, richly manured and deeply dug. Sow at the rate of 2 pounds to the acre.

CABBAGE.

CHÔU. *Berza de repollo.* Кошк.

CULTURE.—Soil for Cabbage should be rich and heavy loam, with good drainage. On such a soil, with an

EARLY JERSEY WAKEFIELD.

abundance of stable or Thorburn's Complete Manure, excellent crops are sure to be grown. For early spring, sow in fall; not too early, or the plants are liable to bolt in the spring instead of heading. In a month the plants will be fit to transplant to coldframes, where they are wintered, taking care, in planting, to set the young plants down to the first leaves. Transplant in spring as soon as the ground can be worked, setting the plants 2 feet apart one way and from 12 to 18 inches the other, according to the variety. If it is desirable to economize space, Lettuce or Radish may be sown between the rows, as they will be out of the way before the Cabbage needs the room. For late or winter crops the seed is sown in May, and the plants set out in July. In this case they are set in rows 2 by 3 feet, so as to work them with a horse and cultivator. To destroy the green worm that is so

destructive to the leaves and heads of Cabbage and Cauliflower, an experienced grower says: "Take one ounce of saltpetre and dissolve it in 12 quarts of water; then take a short-handled whisk broom, dip it in the solution, and sprinkle the plants well. One application is sufficient, unless the stuff is washed off by heavy rains. The liquid, being perfectly clear, never colors the Cauliflower or Cabbage heads." To prevent the turnip flea attacking the young plants, sift fine air-slaked lime or tobacco dust over them as soon as they appear above the ground.

CARDOON.

CARDOON. *Cardo.* Cardon.

CULTURE.—Sow early in spring, in rows where they are to stand, and thin them to 1 foot apart. When full size, bind the plants together with bast or raffia, and earth up like Celery to blanch. The stems of the leaves are used for salads, soups and stews.

	Per oz.	¼lb.	Lb.
480 Large Solid. Grows about 4 feet high: leaves nearly free from spines...per pkt., 10c...	\$0 25	\$0 75	\$2 50

CAULIFLOWER.

CHOU-FLEUR. *Coliflor.* Blumenkohl.

CULTURE.—The same as for Cabbage, except that extra manure and plenty of water will pay upon Cauliflower. If the soil be dry, water frequently, and if the plants could have a heavy mulch of hay or straw, it would keep the soil moist, and the plants would not suffer from drought. The early kinds should be strong enough to plant out not later than the middle of April; the late kinds may be planted out same time as for Cabbage. To destroy the Cauliflower-maggot, it is recommended to take 1 ounce of sulphuret of potassium and dissolve it in 1 gallon of water. Heat the liquid to about 100 degrees, take a large spoon, or something that will hold the 100th part of a gallon, and pour the liquid against the stalk of the plant just above the ground.

THORBURN GILT-EDGE CAULIFLOWER.

		Per oz.	¼lb.	Lb.
482	Extra-Early Dwarf Erfurt. The very best and earliest for forcing under glass; very dwarf and compact, with short stem and small leaves. It should not be confounded with entirely different sorts advertised under the same name. Pkt. 50 cts., oz. \$6.			
483	Thorburn Early Snowball. Our strain of this popular variety is unequalled. It is one of the best for forcing under glass or for the open ground; it is a very sure header, but not so large as our <i>Gilt-Edge</i> . Pkt. 25 cts., oz. \$2.25, ¼lb. \$7.50, lb. \$30.			
484	Thorburn Gilt-Edge. Large, heavy sort, maturing immediately after our <i>Snowball</i> . It is, without any exception, the very best and surest of all the sorts now in cultivation.....	per pkt., 25 cts..	\$2 25	\$7 50 \$30 00

TESTIMONIALS FROM LARGE CAULIFLOWER-GROWERS AND SEED MERCHANTS.

J. M. THORBURN & CO.

CUTCHOGUE, N. Y., July 13, 1898.

Gentlemen: I have used your Gilt-Edge, Snowball and Erfurt Cauliflowers for the last 16 years, and always with good success. I have also used other well-known kinds from other houses, but yours always came out ahead. I have also been selling different kinds of Cauliflower seeds for the three years past for the Southold Town Agricultural Society, and the demand is three to one in favor of yours.

Yours respectfully,

(Signed) HENRY KAELIN,
Purchasing Agent Southold Town Agricultural Society.

J. M. THORBURN & CO.

CUTCHOGUE, L. I., July 11, 1898.

Gentlemen: In reply to your inquiry regarding the merits of your three popular varieties of Cauliflower, I beg to say that I have grown your Large Erfurt since 1876, and your Snowball and Gilt-Edge since they were introduced, and at this time I grow no other varieties. The Gilt-Edge produces very large, heavy heads, requires a long season, and is desirable for early setting to grow for pickling. It makes good heads in warm weather. The Large Erfurt has very fine white heads of large size. It is a sure header, but does not head all at one time, but follows along in succession. We consider it the best for setting from July 4 to 25. Your Snowball is a fine medium-sized variety, heads very clean and quickly, and nearly all at one time. It is, therefore, very valuable for late setting for storing for winter. We use it almost exclusively for the growing of winter Cauliflowers, taking up and storing small, half-grown heads in the latter part of November, in cool cellars or sheds, and holding for the good prices of Christmas and New Year.

Yours truly,

(Signed) WM. A. FLEET.

J. M. THORBURN & CO.

MATTITUCK, N. Y., July 13, 1898.

Gentlemen: I have used your Gilt-Edge, Snowball and Large Erfurt Cauliflower seed for 20 years, and never had a poor ounce. You may use my name in support of your highest claims for them.

Yours respectfully,

(Signed) GEO. C. COOPER.

J. M. THORBURN & CO.

INTERLACHEN, FLA., July 21, 1898.

Gentlemen: In reply to your favor, we would state that, in our opinion, based on our sales of it for the past five years, your Gilt-Edge Cauliflower is by far the best variety for the lower South and for the past 2 years we have sold more of it than of all other varieties combined.

We are so well satisfied with it that we have no desire to list other new introductions, for they have not proved to be its equal in actual field tests.

Yours truly,

(Signed)

H. G. HASTINGS & Co., Seedsmen.

CELERY.

CELERY. *Apios.* Sellerie.

CULTURE.—Sow the seed in a light, rich, dry border, as early as the ground can be worked, in drills 8 or 10 inches apart, and cover the seeds about a quarter of an inch deep, rolling or treading them in if the ground be dry. When fairly out of the seed-leaf, they may be transplanted to another bed, or they may be thinned out to 6 or 8 inches apart, and let grow until wanted to plant out in beds or trenches. The beds should be kept well weeded, and an occasional soaking with water in dry weather will do the plants good. Early in July at the north, a month or six weeks later in the southern states, is the proper time to set the plants out in beds or trenches. Press the soil firmly against the roots. In the garden the better way is to set the plants in shallow trenches. We say shallow, for it is obviously a bad plan to remove all the good soil (as must be done in a deep trench) and put the plants in that which is poor. The plants must be set in a single row in a narrow trench, or the trench may be made into a bed wide enough to hold two, three or four rows, and in this case the plants are in a compact form to be covered for the winter where they grow. This will save much labor where there is no root-cellar for storage, as often happens to be the case. When grown in beds in this way, the rows should be 1 foot apart, and the plants about 8 inches apart in the rows. A bed 4 feet wide will take 4 rows of plants, leaving 6 inches space on the outside of the first and last rows.

THORBURN SHUMACHER CELERY.

The bed should be made very rich with thoroughly decomposed manure. The plants will need to be earthed up two or three times; and in doing this, care should be taken not to let the earth get into the heart of the plant. In field culture the plants are set on the surface in rows 4 feet apart when the Celery is to be earthed up in the field for early use, and 2 feet apart when the plants are to be taken and blanched in the cellar for winter use. The plants are set 6 inches apart in rows. If not grown in beds, the best way to store is to dig trenches in a well-drained spot in the open ground, 1 foot wide, and of a depth a few inches less than the height of the Celery. The plants are then lifted and set close together. The edges of the trench should be made sloping from the tops of the plants. When severe cold weather comes on, cover gradually with leaves, hay or straw, and place boards on top. In such a trench the stalks will blanch perfectly, and may be taken out any time during the winter for use or sale as required. The turnip-rooted or "Knob" Celery needs no earthing up, and may be planted in rows 1 foot apart.

		Per oz.	¼lb.	Lb.
512	Thorburn Fin de Siècle. We consider this the largest, hardiest, solidest, crispest, best keeping and best shipping winter Celery we know of	per pkt., 10 cts...	\$0 30	\$0 85 \$3 00

564 Green Cabbaging	15	30	1 00
565 Lettuce-leaved	15	30	1 00

CRESS.

CRESSON. *Berro o Mastuerzo.* Kresse.

CULTURE.—Sow Nos. 569 and 571 thickly, in shallow drills, every two or three weeks. No. 569 should be cut often, and it will continue to grow. It is useful not only for salad, but for the breakfast table and for garnishing. Nos. 575 and 576 should be sown in damp soil; or if a stream of water can be utilized, they would be much finer. They will also thrive well in damp hotbeds. Rightly managed, their culture is very profitable. To obtain early salad, it is a good plan to sow with water-cress seed a strip 4 inches wide on the outer margin of a hotbed, inside the frame, where it is always cool.

	Per oz.	¼lb.	Lb.
569 Curled or Pepper Grass	\$0 10	\$0 20	\$0 50

J.M. & C.

CORN, SWEET or SUGAR.

MAIZ. Maiz. Maiz.

CULTURE.—Plant in hills 3 feet apart each way, and five or six kernels in a hill. Hoe often and draw soil up to the stem; break off side shoots. Make the ground rich with well-rotted manure. Sown in drills, a greater yield from a given surface will be obtained. The best fertilizer is Thorburn's Complete Manure. By sowing successive lots and properly selecting varieties, the supply of Sweet Corn can be kept up until hard frosts kill the plants.

EXTRA EARLY.

THORBURN EVERBEARING CUCUMBER.

CUCUMBER.

CONCOMBRE. *Pepino.* Gurfe.

CULTURE.—For very early, sow seeds in hotbeds upon pieces of sod, or in small pots, and they can be readily transplanted with a gain of about six weeks before they can be sown in the open ground. Plant out in rich soil when danger of frost is over, or they may be protected by hand glasses, or even by paper held down at the corners with a handful of earth. For general crops, sow in the open ground as soon as the weather is settled and warm, and again every two weeks for a succession. For pickles, sow from the middle of June to the first week in July. Sod land, turned over in the fall, is the best for them. Plant in hills 4 feet apart, putting a shovelful of well-rotted manure in each hill.

		Per oz.	¼lb.	Lb.
660	Thorburn 1896 Pickler. In size, symmetry, slimness, color and productiveness, a perfect pickling strain.....	\$0 10	\$0 25	\$0 80
662	Thorburn Commercial Pickle. A valuable sort of the White Spine type, retaining its dark green color long after pickling; very handsome.....	10	25	80
663	Thorburn Everbearing. Small-sized; very early and enormously productive, and valuable as a green pickler. It continues to flower and produce fruit until killed by frost, whether the ripe Cucumbers are picked off or not.....	10	25	80
663a	Fordhook Pickling. A first-class new pickling sort. It is wonderfully prolific, and continues to bear longer than all others. It is tender and crisp, and of the best size and shape for pickling.....	10	25	80
664	Early Russian. Very early, short; is a valuable variety for small pickles.....	10	20	60
665	Cool and Crisp. Extra early and very prolific; long, straight, slender, and very dark green; good either for pickling or slicing.....	10	20	60
667	Early Short Green. Good for pickling; productive.....	10	20	60
668	Early Green Cluster. Fruit small and in clusters; very prolific.....	10	20	60
669	New Orleans Market. Very productive, a good keeper and shipper; good for forcing or open ground.....	10	25	80
670	White Spine Improved. A very handsome and uniform early variety. It is very productive, crisp and of fine flavor. This is the sort that is so largely grown in the South for early shipping to the northern markets.....	10	20	60
671	“ “ Extra Long. A beautiful, large and well-shaped Cucumber, slightly longer in maturing than the above.....	10	20	60
671a	“ “ Arlington. A fine strain of the Improved White Spine. It is fine either for forcing or for outdoors.....	10	20	60
672	“ “ Peerless. Very early strain.....	10	20	60
673	Evergreen. Very early and prolific; retains its fine, deep green color in all stages of growth.....	10	20	60
674	Long Green. Long and crisp; a popular and reliable variety for pickles.....	10	20	60
675	Long Green Turkey. Fruit very long and rather slim.....	10	20	60
676	Giant Pera. Very long, and one of the best for table use.....	15	30	1 00
678	Green Prolific Pickling. One of the best for pickling; dark green, very productive and of uniform small size.....	10	20	60
679	Nichol Medium Green. Most symmetrical, and a very fine table sort.....	10	20	50
680	Boston Pickling. A favorite eastern sort, of fine quality.....	10	20	60
681	Tailby Hybrid. Very long, and superior for table use.....	10	20	60
682	White Pearl. The best white sort; it ripens early and is very productive.....	10	20	60
683	Small Cherkin. Very small bur; used for pickles.....	10	30	1 00
684	Japan Climbing. Good for frames or open ground.....	10	30	1 00

ENGLISH CUCUMBERS FOR FRAMES.

(*Concombre especes Anglaise pour Couches.*)

CULTURE.—The following are for growing in hotbeds, or houses particularly constructed for forcing, so that a supply can be furnished during the winter months, at which time the prices are very remunerative. Sow seeds in October, November or December, according to the time they are wanted, in small pots, in fibrous loam lightened and enriched with old manure, taking care to give plenty of air and water. Robustness of habit is especially valuable in winter, and therefore the soil should not be too light. Plunge the pots in a frame near the glass, where there is a little bottom heat, and keep them covered with a sheet of brown paper until the seeds

CUCUMBERS—continued.

germinate. Afterwards uncover and ventilate, to insure steadiness of habit. More seeds should be planted than the number of plants required, as some may fail to grow, and others that germinate may be weaklings. None but strong plants should be employed. It will be necessary to fertilize the pistillate flowers with the staminate, in order to render the vines productive, as owing to the absence of insects, they will not produce a crop under glass the same as in the open ground.

☞ Packets contain from 5 to 15 seeds each, according to sort.

DANDELION.

PISSENLIT. *Amargon.* *Pardebblum.*

CULTURE.—The Dandelion is a hardy perennial plant, and one of the most desirable early spring salads. Sow in early spring, in drills $\frac{1}{2}$ inch deep and 18 inches apart; thin out the plants to 12 inches. Keep clear of weeds during the summer, and the ensuing spring the leaves will be fit to cut. They are best, however, when blanched, which makes them tender, and destroys to some extent their bitter taste, without in any way impairing the qualities which make them desirable as greens. The blanching may be done by placing a couple of boards over the rows thus: Λ This excludes the light and improves the greens, rendering them far superior to those found growing wild in the grass without cultivation, which are almost sure to be bitter, and are often unsightly and tough as well.

738 Improved Thick-leaved	40	1 25	4 50

IMPROVED THICK-LEAVED DANDELION.

EGG-PLANT.

AUBERGINE. *Berengena.* *Eierpflanze.*

CULTURE.—Sow in hotbeds very early in spring and transplant when 2 inches high into a second bed or into small pots. If this is not done, thin to 4 inches apart. Do not plant out until weather has become perfectly settled and warm. Cool nights or wet weather will check them. Keep some back in frames for a second planting, in case of weather changing unexpectedly. Keep plants watered for a few days, if the sun is hot when put out. Set out plants 3 feet by 2.

IMPROVED NEW YORK EGG-PLANT.

ENDIVE.

CHICOREE. *Escarola o Endivia.* Endivie.

CULTURE.—Sow in June, July and August; cover lightly; when up, thin out to 8 inches apart, and water well afterward, if dry. When the leaves are 6 or 8 inches long, blanch by gathering in the hand and tying together near the top with yarn or bast. This must be done when quite dry, or they will rot. At the approach of winter, take up carefully, with a ball of earth to each plant, and place close together in frame or cellar for use. They must be kept dry, and have plenty of air, or they will rot.

BROAD-LEAVED ENDIVE.

FENNEL, FLORENCE or NAPLES.

FENOUIL DE FLORENCE. *Finocchio di Napoli.*

CULTURE.—Sow in spring, in rows 16 to 20 inches apart. Thin out so as to have the seedlings 5 or 6 inches apart, and water as plentifully as possible. The plant is usually eaten boiled. In flavor it resembles Celery, but with a sweet taste and a more delicate odor. Per oz., 15 cts.; per $\frac{1}{4}$ lb., 50 cts.; per lb., \$1.50.

KALE, or BORECOLE.

CHOU VERT FRISE. *Col.* Krauskohl.

CULTURE.—Nos. 759 to 773 are cultivated and grown exactly like Cabbage. No. 777 sow in September for early greens. Sow 780 early in the spring in a hotbed, and when from 1 to 2 inches high transplant into a bed or border that has been highly manured and deeply dug. The plants should stand 2 feet apart in rows 3 feet apart. The soil should be kept mellow and free from weeds. Cover with litter or leaves during the winter. Plants started and grown in this way should be fit to blanch the following spring. The seed may also be sown early, in the open border, and transplanted in rows (as directed above), as soon as out of the seed-leaf; but they will need to be a year older than the hotbed plants before being fit to blanch. Sea Kale is not fit to eat until it has been blanched, either under large pots, or by banking up with sand. The midribs are the parts eaten. They are cooked like Asparagus, and usually served with drawn butter.

783 Jersey Winter Kale, or Cow Cabbage. Said to be hardy from New Jersey southward. The leaves make valuable winter cattle-feed	10	30	1 00

KOHLRABI.

KOHLRABI.

CHOU-RAVE. *Colinabo.* Kohlrabi.

CULTURE.—This is an excellent vegetable, and should be grown in every garden. Sow in spring, in rows 18 inches apart, afterwards thinning the plants to 8 or 10 inches. If the weather is suitable the thinnings may be planted, but it is considered difficult to transplant. Keep the weeds down, and when the thickened stems above ground are 2 or 3 inches through they are fit to eat, and should be used at once, being tough when old. They are cooked same as Turnips, and when well grown and used at the proper stage, are tender and very palatable.

	Per oz.	$\frac{1}{4}$ lb.	Lb.

791 Large White, or Green. Forms a larger ball; not so fine, but more productive.	15	50	1 50

LETTUCE.

LAITUE. Lechuga. Salat.

CULTURE.—Sow Nos. 799, 803, 806 and 807 in hotbeds in March, and in the open ground as soon as it can be

worked, and transplant to rows 8 inches apart. Sow in two weeks' time same varieties again, as also Cos, for a succession. In August sow any of the varieties. In October some of these may be planted in frames, to head in winter and early spring. Always sow thin, and thin out well, or the plants will not be strong. The last spring sowing had better be grown where sown, being thinned out to 6 or 8 inches apart. To have Cos in good order, they must be sown in a hotbed early in the year, and transplanted to a coldframe, so as to have good plants to set out at the opening of the ground. They require tying for a few days, when grown, to blanch. Lettuce requires good ground, enriched with thoroughly rotted manure and well pulverized. The after-culture should be close and careful, to secure the best results.

ICE-PLANT.

CULTURE.—Sow in good garden soil as soon as the ground becomes warm in spring, in shallow drills 1 foot apart. Thrives well in hot, dry climates. Desirable for boiling like Spinach, or for garnishing. Pkt. 5c., oz. 40c.

LEEK.

POIREAU. *Puerro.* Porro.

CULTURE.—Sow very early in the spring in drills 6 inches apart and 1 inch deep. Thin out to 1 inch. When about 7 inches high, transplant them in rows 12 inches apart, and as deep as possible, but do not cover the young center leaves. Water thoroughly, if dry when planted out. Draw earth up to them as they grow; rich soil is required. Take up and store in earth in a cool cellar before winter weather. The seeds may also be sown in September, and the young plants transplanted in spring to where they are to remain.

Craniolaria, Proboscidea, Lutea (three varieties).....	each..\$0 30	\$0 85	\$3 00

MUSHROOM SPAWN.

BLANC DE CHAMPIGNON. *Seta.* Champignonbrut.

CULTURE.—Mushrooms may be grown in cellars, under benches of greenhouses, or in sheds, wherever the temperature of 50 degrees can be kept up through the winter. The beds should be made from November to February, according to the time the Mushrooms are wanted, and it requires about two months for them to begin bearing. Secure fresh horse-dung, free from straw and litter, and mix an equal bulk of loam from an old pasture with it. Keep this under cover, taking care to turn it every day to prevent heating, until the pile is large enough to make a bed of the required size. Three or 4 feet wide, 8 inches deep, and any length desired, are the proper proportions for a bed; but these may be varied. Prepare the mixture of loam and manure, making the bed in layers, and pounding down each with the back of the spade. Leave this to heat through for a

few days, and as soon as the heat subsides to 90 degrees, make holes in the bed about a foot apart each way, into which put pieces of the spawn 2 or 3 inches in diameter; fill up the holes with the compost, and at the expiration of a week or 10 days the spawn will have thoroughly diffused itself through the bed. Spread a layer of fresh soil over the heap to the depth of 2 inches, and cover with 3 or 4 inches of hay, straw or litter. Examine the bed often to see that it does not get dry. Take special care, however, when water is given, that it be at a temperature of about 100 degrees.

From experience with French and English Spawn we find there is an important difference between them. If the manure in the bed is in proper condition, the French Spawn will take hold and grow fully as well as the English; but if the bed is not in the right state, it will often rot. The English Spawn, on the contrary, after starting a little, will remain in a comparatively dormant state for a long time without losing its vitality. It is well to keep these points in mind in ordering spawn.

English Spawn. 15 cts. per lb., 10 lbs. for \$1, 100 lbs. for \$9.

French Spawn. Per 3-lb. box, \$1.20; in bulk, per lb., 45 cents.

MUSHROOMS.

MELON, MUSK.

MELON MUSCADE. *Melon Muscatel.* Cantalupe.

CULTURE.—Select a light, sandy, rich soil and after all danger of frosts is over, and the ground has become warm and dry, plant in hills 4 to 6 feet apart each way, 6 to 12 seeds to a hill. When up, and all danger of insects has passed, pull out all but 3 plants. Cultivate until the vines cover the ground, and pinch the ends of the growing shoots to induce early fruiting. Ashes, lime, or even dry road-dust, is excellent to sift over the young plants when the dew is on, to prevent the attacks of insects. A few hills for early use may be had by sowing in hotbeds, on pieces of sod or in pots. The seed may also be started out of doors under hand frames or glasses.

LONG ISLAND BEAUTY MUSK MELON.

It is quite important that proper soil be selected for growing Musk Melons, as on heavy soil the quality will be poor.

979 White-seeded Ice Cream. Very early; red flesh.....	10	20	50
981 Phinney. Early, and of fine quality; red flesh.....	10	20	50
982 Scaly Bark. Thin, tough rind, flesh crimson, tender and sweet; ships well.....	10	20	50
983 Dixie. Excellent quality; very large and solid; flesh red; intermediate.....	10	20	50
984 Duke Jones. Large, handsome, dark green; red flesh of fine flavor.....	10	20	50
986 Seminole. Very large; quality first-rate; intermediate.....	10	20	50
987 Cuban Queen. Solid and heavy; skin marked regularly; excellent quality; early.....	10	20	50
990 Black Spanish. Large, roundish, nearly black; dark red flesh; early.....	10	20	50
996 Mountain Sweet. An old and reliable sort; flesh red; late.....	10	20	50
1000 Florida Favorite. A superior strain; improvement on Rattlesnake; intermediate.....	10	20	50
1003 Goodwin Imperial. Crimson flesh, fine quality; small, nearly round; extra early.....	10	25	75
1025 Southern Rattlesnake. Oblong, dark and striped; bright red flesh; late.....	10	20	50
1026 Cole Early. Medium size; red flesh; green skin.....	10	20	50
1027 Sweetheart. Very large; bright skin; fine quality.....	10	20	50
1028 Wonderful Sugar. Very sweet; handsome, oblong shape.....	10	20	50
1029 Apple Pie, or Colorado Citron. Used for preserves; green seed.....	10	20	50
1030 Citron. Round and handsome; for preserving; red seed.....	10	20	50

MUSTARD.

MOUTARDE. *Mostaza.* Senf.

CULTURE.—Sow thickly during early spring, in shallow drills, and press the earth well down. For fall salad, sow in September, or in frames or boxes during winter.

	Per oz.	$\frac{1}{4}$ lb.	Lb.
1035 Black. These seeds form the mustard of commerce.....	\$0 05	\$0 10	\$0 25
1036 White London. Leaves used for salad while young; grows very rapidly.....	05	10	25
1038 Giant Southern Curled. Very large leaves.....	10	25	80
1039 Chinese Broad-leaved. Leaves of agreeable flavor when cooked like Spinach.....	15	50	1 50

NASTURTIUM.

CAPUCINE. *Maraneula.* Nasturtium.

CULTURE.—Sow as soon as all danger of frost is past, in drills about an inch deep. The tall kinds require fences or poles on which to climb. The seeds are used in flavoring pickles, or as a substitute for Capers.

	Per oz.	$\frac{1}{4}$ lb.	Lb.		Per oz.	$\frac{1}{4}$ lb.	Lb.
1041 Tall Crimson	\$0 15	\$0 30	\$1 00	1043 Tall Mixed	\$0 10	\$0 25	\$0 75
1042 Tall Yellow	15	30	1 00	1044 Dwarf Mixed	10	30	1 00

ONION.

OIGNON. Cebolla. Zwiebel.

CULTURE.—Sow in rich, sandy soil, in drills 1 foot apart, as soon as the ground can be worked in spring. Thin to 3 or 4 inches, using the rake and hoe frequently to keep down the weeds.

- 1045 **White Early Barletta.** A small white Italian sort; earliest of all. Oz. 25 cts., $\frac{1}{4}$ lb. 75 cts., lb. \$2.50.
- 1047 **White Queen.** Pure white; small; flat; extra early; fine for pickling. Oz. 25 cts., $\frac{1}{4}$ lb. 75 cts., lb. \$2.50.
- 1049 **White Pearl, Italian grown.** Extra early; round; white; fine flavor. Oz. 25 cts., $\frac{1}{4}$ lb. 75 cts., lb. \$2.50.
- 1053 **White Victoria.** Italian, white, globular sort; very large; mild flavor. Oz. 25 cts., $\frac{1}{4}$ lb. 75c., lb. \$2.50.
- 1054 **White Large Portugal.** The standard large flat sort. Oz. 30 cts., $\frac{1}{4}$ lb. 85 cts., lb. \$3.
- 1055 **White Large Globe** (Southport strain). Very large and handsome. Oz. 30 cts., $\frac{1}{4}$ lb. 85 cts., lb. \$3.

		Per oz.	$\frac{1}{4}$ lb.	Lb.

PEAS.

Pois. Chicharos o Guisantes. Erbsen.

CULTURE.—A week may be gained in earliness by sowing a quantity in moist sand placed in a box in the cellar, and planting outside when well sprouted. Light, dry soil, not over rich, suits the Pea. Sow as early

as the ground can be worked, and again every ten days for succession. Peas may be sown in this vicinity as late as 20th of August. Sow in single or double rows, from 4 to 6 feet apart, according to the different heights, about an inch apart in the row (except such sorts as we note to sow thinly), and 4 inches deep. In this climate the O'Rourke Pea, if planted from the 10th to the last of August, will produce a fair crop for fall picking, when Peas will be most acceptable. Hoe often, and keep the ground clean and fine. The tall sorts can be made to bear more freely by pinching-in. The dwarf varieties may be grown in beds like bush beans, with rows about the same distance apart. The holes which are sometimes found in Peas are caused by the pea weevil (*Bruchus pisi*). This insect is a native of this country, but, as usual with such pests, has spread rapidly, and is now found nearly all over the world. The beetles lay their eggs on the young pods, and the larvæ, as soon as hatched, make their way through the pods into the nearest Peas. They do not, as is sometimes supposed, destroy the germ, for Peas will grow if they are infested, but the plant is likely to be more feeble, and for this reason will not produce as large a crop as if free from the weevil.

THORBURN EXTRA-EARLY MARKET.

EXTRA EARLY PEAS.

	Height in feet.	Per qt.	Per ½pk.	Per pk.	Per bus.
1141 Thorburn Extra-early Market. Our standard market-garden extra-early Pea; productive and profitable to grow.....	2½	\$0 25	\$0 75	\$1 25	\$4 00
1143 First-of-All. First-class selected strain of extra-earlies.....	2½	25	75	1 00	3 75

1330	Connecticut Field. Grown for stock; productive.....	10	25	

CHEESE PUMPKIN.

SEED POTATOES.

Grown Expressly for Seed.

POMME DE TERRE.

Patatas.

Pottoffeln.

CULTURE.—In order to have the best success in growing Potatoes, it is necessary to plant as early as the ground can be made ready. Select a rich soil, and plant in rows 3 feet apart, and the sets 1 foot in the rows. If

wood ashes and plaster can be procured, sow a good dressing over the field after the Potatoes are up. If a *very early* crop is desired, it will be necessary to *sprout* the Potatoes before planting. Cut the Potatoes into pieces of any size desirable, and place in a warm, light room for four to six weeks before required for planting in the open ground. During this time shoots will start out strong and vigorous, so that, as soon as planted, they will send out roots and grow

much more rapidly than those treated in the ordinary way. Another method is to place the sets in a hotbed two weeks before they are wanted, and then lift carefully and set out on fresh horse-dung, so that the heat will cause them to start at once. If the Colorado potato-beetle makes its appearance, the vines must be dusted with Paris green mixed with about 80 parts of plaster; or, what is better, mix the Paris green in water, one small table-spoonful to a pail, and apply with a small brush or broom. Take care to stir the mixture often, or else the Paris green will settle to the bottom. Two or three applications during the season will usually suffice to clean off all the beetles. Three to 4 barrels to the acre.

 These are the prices ruling in January; later on they may be higher.

EARLY VARIETIES.

		Per ½pk.	Pk.	Bus.	Bbl.
1349	The Thorburn. We recommend it as positively the best for first crop. It is the <i>earliest of all</i> , and the <i>best in quality</i> ; is also very productive and of good size and form	\$0 50	\$0 85	\$2 50	\$4 50
1350	Thorburn's Beauty of Hebron. Slightly flesh-colored skin, with pure white flesh. Very productive and of the finest quality; a first-class early variety.....	40	70	2 00	3 50
1351	Early Norther. Extra-early, very prolific; shape of the Early Rose; fine table quality.....	40	70	2 00	3 75
1352	Early Puritan. Very early; white skin and flesh, finest quality.....	40	70	2 25	4 25
1354	Bovee. Extra-early, very productive, of fine quality; flesh white and very dry....	50	85	2 50	5 50
1363	True Early Rose. The popular market sort; very early, fine quality; very productive	40	70	2 00	3 50

INTERMEDIATE AND LATE VARIETIES.

1367	Thorburn New White Peach-blow. The flesh and skin are pure white and very dry. One of the best for keeping for winter use	50	85	2 50	4 50
1368	Carman No. 1. This most valuable Potato was introduced by us in 1894, and it is now a recognized high-class standard sort the world over. It is in every respect the finest second-early Potato ever offered; enormous yielder, handsome and uniformly large; peculiarly white skin and flesh; perfect in quality and very dry....	40	70	2 00	3 50
1369	Carman No. 3. One of the best late Potatoes; the greatest yielder ever introduced; very large tubers; of handsome form and few and shallow eyes	40	70	2 00	3 50
1370	Sir Walter Raleigh. A fine new variety for main crop; very productive and uniform, all the tubers being of marketable size. Flesh white and of best quality...	50	85	2 50	4 50
1372	Late Puritan. Resembles the Early Puritan in appearance and quality, but is more productive	40	70	2 25	4 25
1384	State of Maine. Very productive; white skin and flesh; free from rot and of superior quality; a fine late variety.....	40	70	2 00	4 00
394	Delaware. Large, and of fine quality; in color white; an immense yielder.....	40	70	2 00	4 00

PEPPER.

PIMENT. *Pimiento.* Pfeffer.

CULTURE.—Sow in hotbeds in March, and when the soil has become warm, set in rows 2 feet apart and 18 inches in the rows; hoe frequently. The plants may also be forwarded in small pots.

	Per oz.	¼lb.	Lb.
1412 Ruby King. Beautiful bright red fruits, 4 to 6 inches long; very mild; one of the best for stuffing..	\$0 25	\$0 75	\$2 50
1413 Large Squash. Productive; much used for pickles.....	20	60	2 25

1424 Yellow Cherry. Like the above, but yellow in color.....	30	85	3 00
1425 Red Chili. Very productive; very small; red, and very pungent....	25	75	2 50
1426 Red Cluster. A new type of Chili, with upright, bright red fruits	\$0 25	\$0 75	\$2 50
1427 Monstrous. Very large French sort, about 6 inches long and 3 inches thick; of mild flavor and valuable for use in the green state.....	30	85	3 00
1428 Sweet Spanish. Large, mild; used for salad.....	25	75	2 50
1429 Sweet Mountain. Large size, regular, handsome shape, mild flavor; very early. Largely used for mango pickles	25	75	2 50
1430 Celestial. At first fruit is yellow, but when fully matured it becomes a deep scarlet...	25	75	2 50
1432 Elephant's Trunk. Long scarlet fruits, shape of an elephant's trunk.....	60	1 75	6 00

RUBY KING PEPPER.

	Per oz.	¼lb.	Lb.
1426 Red Cluster. A new type of Chili, with upright, bright red fruits	\$0 25	\$0 75	\$2 50
1427 Monstrous. Very large French sort, about 6 inches long and 3 inches thick; of mild flavor and valuable for use in the green state.....	30	85	3 00
1428 Sweet Spanish. Large, mild; used for salad.....	25	75	2 50
1429 Sweet Mountain. Large size, regular, handsome shape, mild flavor; very early. Largely used for mango pickles	25	75	2 50
1430 Celestial. At first fruit is yellow, but when fully matured it becomes a deep scarlet...	25	75	2 50
1432 Elephant's Trunk. Long scarlet fruits, shape of an elephant's trunk.....	60	1 75	6 00

RAMPION.

RAIPONCE. *Reponche.* Rapunzel-Rübe.

CULTURE.—Sow in the open ground early in May, either broadcast or in drills 10 inches apart. As the seed is very fine, it merely requires to be pressed firmly into the soil. Thin out the seedlings if they come out too thick, and water frequently during hot weather. The roots may be gathered for use from October onward throughout the winter.

Per oz. ¼lb. Lb.

1438 Rampion. The roots and leaves are excellent as salad.....	\$0 30	\$0 85	\$3 00
---	--------	--------	--------

RAMPION.

ROQUETTE.

ROQUETTE. *Jaramago.*

CULTURE.—Sow early in spring, in rows, and thin out to 8 or 10 inches. If kept well scuffled and watered, the tart flavor of the leaves is greatly diminished. This flavor is not pronounced in the small leaves, which are used for salad. The flowers, appearing from May to June, have very much the odor of orange blossoms.

Per oz. ¼lb. Lb.

1439 Roquette	\$0 10	\$0 30	\$1 00

EARLY WHITE TURNIP RADISH.

ROUND BLACK SPANISH WINTER RADISH.

SCARLET TURNIP FORCING RADISH.

WHITE SUMMER TURNIP RADISH.

FRENCH BREAKFAST RADISH.

THORBURN IMPROVED BLACK SPANISH RADISH.

OLIVE-SHAPED GOLDEN YELLOW RADISH.

RADISH.

RADIS ET RAVE. Rabanos y Rabanitos. Radies und Rettig.

CULTURE.—Sow as soon as the ground is dry in the spring, in rows 8 to 12 inches apart, every week or ten days for a succession, up to the middle of June, after which they are but little used, unless a cool northern spot can be had, where the ground is shaded during part of the day. They should be sown in light, rich soil, as a crisp Radish cannot be produced in heavy soils. Sow also in early fall for late crops and winter use. Sow 8 to 10 pounds to the acre. Radishes should be eaten when quite small; it is a mistake to let them grow too long and too large. This applies particularly to the French Breakfast.

Those marked with the asterisk (*) are best suited for market-gardeners.

WHITE STRASBURG SUMMER RADISH.

NON PLUS ULTRA RADISH.

RHUBARB.

RHUBARB. *Ruibarbo.* *Rhabarber.*

CULTURE.—Sow seed in a coldframe, in a fine, rich, sandy loam, about the first of March, in drills 4 inches apart. Keep the frame covered during nights and cold days, so that the soil will not freeze, and in six to eight weeks the plants will be large enough to set in the open ground. Transplant to a rich soil, and set in rows 12 inches apart and 12 inches in the row. The following spring transplant again to 4 or 5 feet apart each way, and the next spring the stalks will be large enough to pull. When roots are set out, plant them 4 or 5 feet apart each way, and keep the weeds down. If roots are used, a crop may be had after one season, which is much better than sowing seeds where only a few plants for family use are needed. In the fall the bed should have a thick dressing of coarse manure, to be spaded under in spring.

SALSIFY.

		Per oz.	$\frac{1}{4}$ lb.	Lb.
1514	Linnaeus. The earliest	\$0 20	\$0 50	\$1 50
1515	Victoria.	20	50	1 50
	Roots.....each, 10 cts.; per doz., \$1.			

SALSIFY, or VEGETABLE OYSTER.

SALSIFIS. *Ostion Vegetal.* *Haferwurzel.*

CULTURE.—Sow as early as the ground can be worked in the spring, in drills 12 inches apart, 1 inch deep, and thin out to 6 inches in the row. Keep them free from weeds. Cultivate the same as for Carrots and Parsnips. A part of the crop may be left in the ground till spring, when it will be found fresh and plump. The roots are cut into pieces $\frac{1}{2}$ inch long, boiled until tender, and then served with drawn butter, in which way it is a delicious vegetable. They are also mashed and baked like Parsnips, and have a sweet, agreeable flavor. Mashed and fried, the flavor is much like that of the oyster. Sow 8 to 10 lbs. to the acre.

		Per oz.	$\frac{1}{4}$ lb.	Lb.
1528	Long White French	\$0 15	\$0 40	\$1 25
1529	Thorburn Improved Thick-rooted. Very thick and smooth.	25	75	2 50
1530	Mammoth Sandwich Island. Large and superior	15	50	1 50

SCOLYMUS.

A vegetable from Spain. The roots resemble a small Parsnip, and will keep through the winter like a Turnip. It is cultivated exactly like the Carrot, except that it should be grown in rows 3 feet apart and 18 inches in the rows. It is eaten boiled, like Salsify.

		Per oz.	$\frac{1}{4}$ lb.	Lb.
1535	Scolymus	\$0 30	\$0 85	\$3 00

SWISS CHARD, or SILVER BEET.

This is a Beet producing leaves only, of a superior quality to those of the ordinary Beet, and excellent as greens. Cultivate about the same as Spinach, by sowing the seed in early spring, in drills about a foot apart. As it grows, thin out for use, and keep clear of weeds if success is desired. Good cultivation will greatly increase the delicacy and tenderness of the leaves.

		Per oz.	$\frac{1}{4}$ lb.	Lb.
1536	Swiss Chard	\$0 10	\$0 20	\$0 50

SPROUTS.

CHOUX VERTS NON POMMES.

CULTURE.—Sow No. 1537 very early in spring, and Winter Kale in September. Full directions for growing the latter will be found on page 25, under head of Kale.

1537	Spring Sprouts, or English Rape.
	Per lb., 15 cts.; per 100 lbs., \$7.
1538	Winter, or Siberian, Thorburn Improved. Per oz., 10 cts.; per $\frac{1}{4}$ lb., 25 cts.; per lb., 75 cts.

SWISS CHARD.

SCORZONERA.

SCORZONERE. *Escorzonera*. *Scorzionwurzel*.

CULTURE.—Cultivate the same as Salsify. It is cooked in the same manner, but on account of it being some what more difficult to raise, is seldom seen in cultivation. Considered by many superior to Salsify. It is also called Black Salsify.

	Per oz.	$\frac{1}{4}$ lb.	Lb.
1541 Scorzonera	\$0 25	\$0 75	\$2 50

SCORZONERA.

SORREL.

OSEILLE. *Acedera*. *Sauerampfer*.

CULTURE.—Sow in spring in drills 18 inches apart, in a rich soil, and keep the flower-stems cut off as they appear. It remains in the ground year after year, and only needs to be taken up and divided once in four or five years. To be cut and cooked precisely like Spinach; or it is excellent cooked with it, one-third Sorrel to two-thirds Spinach. It is also used for soups. Very nice to be eaten after it has become cool. Inasmuch as the hot sun tends to increase its acidity, a northern exposure is preferable.

	Per oz.	$\frac{1}{4}$ lb.	Lb.
1544 Garden, Large French	\$0 15	\$0 40	\$1 25
1545 " Mammoth Lyons . Extra-large improved strain	20	60	1 50

SORREL.

SKIRRET.

CHERVIS. *Zuckerturzel*.

CULTURE.—Sow in drills $\frac{1}{2}$ inch deep, a foot apart; thin out to 8 inches in the row; keep down the weeds. Take up the roots before winter, and store in sand or earth. It is a plump, fleshy root, containing a quantity of sugar, and is eaten like Scorzonera or Salsify.

	Per oz.
1546 Skirret	\$0 40

SPINACH.

EPINARD. *Espinaca*. *Spinat*.

CULTURE.—Sow in early spring, in drills a foot apart (10 to 12 lbs. to the acre), every two weeks, for a succession, and as it grows, thin out for use. For fall use sow in August, and for winter crop in September. Cover that which is left out over winter with straw or leaves, after the weather becomes quite cold. Keep clear of weeds. Sow the seed of New Zealand (which must be scalded and soaked in hot

water before sowing) in hills 3 feet apart each way, three or four seeds in a hill. This is fit for cutting all summer.

	Per oz.	$\frac{1}{4}$ lb.	Lb.
1566 Round Viroflay (Thick-leaved) . Has very large, thick, dark green leaves; the favorite market-gardeners' sort for fall or spring sowing.....	\$0 10	\$0 15	\$0 35

1585 Early White Scallop Bush. A good early shipping variety....	10	20	50
1586 Silver Custard. A mammoth strain of Early White Bush. It is very large, and the flesh is of fine quality.....	10	20	60

1588 Summer Crookneck. Yellow fruit; distinct; best for summer.....	10	20	50
1589 Giant Summer Crookneck. Double the size of the above.....	10	20	60
1589a Giant Summer Straightneck. Same as above, except that most of them are <i>straight-necked</i>	10	20	60
1590 Egg-Plant Bush Squash. White flesh; suitable for frying, like egg-plant.....	10	25	75
1590a Cocozell Bush. A fine variety; oblong shape; skin smooth, dark green, marbled yellow or pale green	15	30	1 00

RUNNING VARIETIES.

1591 Early Orange Marrow. Quite distinct; very early, and of most delicate flavor; suitable for fall or winter.....	10	20	50
1592 Bay State. Hard, blue shell; for fall or winter.....	10	20	60
1593 Boston Marrow. Oval; bright orange; flesh yellow and fine.....	10	20	50
1594 Hubbard. Well known, and liked for late use; of superior quality; large size; color green, marked with orange; flesh dry, fine-grained, and of fine quality.....	10	20	60
1594a Mammoth Warted Hubbard. Immense size, and completely covered with warts. Of fine table quality.....	10	25	75
1595 The Faxon. Medium size; very early and productive; orange flesh of fine quality....	10	20	60
1596 Turban. Orange-yellow flesh; good flavor.....	10	25	75
1599 Pike's Peak. Thick, bright orange flesh; fine winter sort	10	20	60
1600 Essex Hybrid. A good fall and winter sort.....	10	20	60
1601 Marblehead. Resembling the Hubbard, but has gray skin; very productive, and a fine keeper; dry, sweet, and of the finest flavor.....	10	25	75
1602 Perfect Gem. Round, white; very productive and of fine quality; for fall or winter...	10	20	60
1604 Cocoanut. Of first-rate quality, and very prolific.....	10	25	75
1605 White Chestnut. Like the Hubbard; dry as a boiled chestnut.....	10	25	75
1606 Delicata. Orange-yellow, striped green; small size, but very prolific; it is extra early, very solid, and a good keeper; flesh dry and of fine quality.....	10	20	60
1607 Fordhook. One of the best winter sorts; fine quality.....	10	25	75
1609 Pineapple. Peculiar shape, white skin and flesh; fine late sort.....	10	20	60
1610 Canada Crookneck. Small, well-known winter sort; green skin.....	10	20	60
1610a Winter Crookneck. One of the best winter sorts.....	10	20	60
1611 Der Wing. Light yellow flesh; very sweet; small, warty, winter sort.....	10	20	60
1612 The Warren. A new type of the Essex Hybrid; of superior quality.....	10	20	60
1613 Mammoth Chili. Grows to an enormous size; rich, orange-yellow.....	20	50	1 50

VEGETABLE MARROW.

1614 English. The true English strain; cream-color, merging into deep yellow; white flesh; about 9 inches long.....	10	25	75
1615 Italian (Cocozelle di Napoli). Grows about 20 inches long, with a diameter of 3 or 4 inches. Skin smooth, dark green, marbled yellow or paler green. In Italy it is eaten when quite young	15	30	1 00

TOMATO.

TOMATO. *Tomates.* Liebesäpfel.

CULTURE.—Sow in a hotbed in early spring, or the seed may be sown in shallow boxes and placed in a window, when one does not wish to have the trouble of making a hotbed. Transplant to the open ground when all danger of frost is past, setting the plants 3 or 4 feet apart each way. Some support should always be provided for the vines, to keep the fruit from touching the ground. Fruit may be had several weeks earlier by sowing seed quite early, and transplanting to small pots; when these are filled with roots, shift to a larger size, and transplant to open ground when the weather is warm and settled, shading from the sun for a day or so.

	Per oz.	¼lb.	Lb.
1616 Thorburn "Rosalind." Beautiful rose color; large and of uniform, round shape, smooth, solid, fine flavor; medium early; very productive.....	\$0 50	\$1 50	\$5 00
1616a Thorburn Novelty. Large, solid; deep scarlet; globular shape. For growing under glass or outdoors.. pkt., 10 cts...	35	1 00	3 50
1617 The Waldorf. (Thorburn.) Perfect shape, large, smooth, solid; rose color; medium early; very productive.....	30	85	3 00
1618 The Democrat. (Thorburn.) The finest large Tomato; bright rose.. pkt., 10c...	40	1 25	4 00
1619 The Autocrat. (Thorburn.) Very large, solid and productive; color of Acme	25	75	2 50
1621 Thorburn Terra Cotta. Quite distinct in color, form, skin and flesh; pure <i>terra cotta</i>	\$0 30	\$0 85	\$3 00
1622 Thorburn Lemon Blush. Skin and flesh bright lemon, with a faint rose blush; large..	30	85	3 00
1623 Thorburn Long Keeper. Bright red, early, very productive; fine keeper.....	25	75	2 50
1624 Thorburn New Jersey. One of the finest sorts; large, solid, smooth, bright scarlet...	25	75	2 50
1625 Freedom. Early, regular and uniform; bright scarlet	25	75	2 50
1626 Matchless. Extra large; smooth and handsome; bright red; very solid.....	30	85	3 00
1627 Early Ruby. Very early; large size; bright scarlet color.....	30	85	3 00
1628 Ponderosa. The largest variety in cultivation	40	1 25	4 00
1629 Crimson Cushion. Extra large; handsome; bright crimson.....	50	1 50	5 00
1630 Ignomum. Very prolific; earliest of the large, deep red, smooth varieties.....	25	75	2 50
1631 Sutton's Best of All. Highly recommended for growing under glass.. per pkt., 10 cts...	50	1 50	5 00
1632 " Eclipse. Medium size, perfect shape and color; for forcing or open ground.. per pkt., 10 cts...			
1633 Dwarf Champion. Quite distinct, early; resembles the Acme in appearance	25	75	2 50
1634 " " New Scarlet. Light scarlet color; prolific, early; good quality....	30	85	3 00
1635 Imperial. Early, large, smooth, solid; fine quality; color of Beauty.....	25	75	2 50
1636 Atlantic Prize. The earliest of all; smooth, bright red and of good size.....	25	75	2 50
1638 Perfection. Early, regular and productive; reddish scarlet.....	20	60	2 00
1640 Favorite. Large, smooth, productive, and a good shipper	20	60	2 00
1641 Beauty. Large, smooth, dark, pinkish red; thick flesh; regular form.....	20	60	2 00
1642 Stone. Very large, perfectly smooth; fine bright scarlet.....	20	60	2 00
1643 Fordhook First. Extra early, fine, smooth, solid; medium size.....	30	85	3 00
1645 Acme. Medium size; smooth and good; purplish pink color.....	20	60	2 00
1646 Paragon. Bright red; round; very productive.....	20	60	2 00
1647 Table Queen. Large, smooth, round, solid.....	35	1 00	3 50
1648 Honor Bright. Rich, bright red; long keeper and fine shipping sort.....	25	75	2 50
1649 Royal Red. Intense bright red color; good main-crop variety.....	25	75	2 50
1650 Fordhook Fancy. Bushy habit; fruits medium size, smooth and regular.... pkt. 10c..	50	1 50	5 00
1651 Mikado. Very large, smooth, solid; purplish red.....	25	75	2 50
1653 Trophy Improved. Very solid; standard late variety; fine for canning; dark scarlet..	25	75	2 50
1654 Lorillard. Bright, glossy red, smooth; of fine flavor, and very early.....	30	85	3 00
1656 Golden Queen. About size and form of Beauty; smooth, golden yellow.....	30	85	3 00
1657 Red Plum. Bright red, round, regular; for pickles.....	25	75	2 50
1659 Yellow Plum-shaped. Round and regular; bright yellow; used for pickles.....	25	75	2 50
1660 Yellow Pear-shaped. Handsome, yellow, pear-shaped fruits.....	25	75	2 50
1664 Peach, Red. Resembling a peach; for preserves, pickles and exhibition; quality excellent.	25	75	2 50
1668 Yellow Peach. Very handsome in form and of a beautiful clear yellow color.....	25	75	2 50
1675 Yellow Cherry. Similar to preceding, save in color.....	25	75	2 50
1676 Red Cherry. Small fruits, used for pickles; very handsome	25	75	2 50
1678 Red Pear-shaped. Fruit handsome and solid; fine for preserves.....	25	75	2 50
1682 Red Currant. Very small and handsome; for preserves.....	30	85	3 00
1685 Strawberry. (Winter Cherry or Husk Tomato.) Small fruit; makes delicious sauce..	30	85	3 00

TURNIP.

NAVET. Nabo. Rübe.

CULTURE.—For early Turnips sow as soon as ground opens in spring. Nos. 1766 to 1774 should be sown from any time in July to first of August; but the other kinds, for winter use, may be sown from middle of July to end of August. Turnips are generally sown broadcast, but much larger crops are obtained (particularly of the Ruta-Bagas) by cultivating in drills 18 inches apart, and thinning to 6 inches in the drill. Sow in drills, one pound to the acre; broadcast, two to three pounds to the acre.

RED-TOP STRAP-LEAF.

1733	White French, or Rock.	Very productive and a fine keeper	Per oz.	1/4lb.	Lb.
1738	Pomeranian White Globe.	Good either for table or stock	\$0 10	\$0 20	\$0 50
1739	Cow Horn.	Long white, in shape resembling a cow's horn	Per oz.	1/4lb.	Lb.
1740	Large White Globe.	Large English variety	10	20	40
1741	Green Globe.	Very large white-fleshed, green top	10	20	40
1746	White Tankard.		10	20	50
1747	Yellow Globe.	Good and sweet; keeps fairly well	10	20	50
1748	Thorburn Yellow Stone.	Fine, hard winter sort	10	20	60
1749	Golden Ball.	Very handsome; keeps fairly well	10	20	50
1750	Yellow Malta.	Early and of fine flavor	10	25	75
1752	Yellow Finland.	Small, early, flat; distinct	10	25	85

RUTA-BAGA.

PREPARE FOR THE CENSUS.

Enumerators will begin to take the Twelfth Census of the United States on June 1, 1900. The inquiries relative to agriculture will cover the crops and products of the calendar year 1899, but the enumeration of live stock, fowls, bees, etc., will embrace those “on hand June 1, 1900.”

All farmers are urged to make written records of their farm operations during the year 1899, so that when the enumerator calls next June, the information to be gathered by him will be readily at hand. The law requires for each farm:

Acreage, Tenure and Race: Total acreage; acres improved; acres unimproved; acres irrigated.

Values: Value of whole farm; value of buildings and permanent improvements; value of all machinery, implements, vehicles, etc., thereon.

Acreage and quantity of all crops, such as Grains, Cotton, Tobacco, Vegetables, Potatoes, Corn, etc., raised in 1899.

Number and value of Live Stock, Fowls, Bees, etc., on hand June 1, 1900.

Quantity and value of Milk, Cheese, Eggs, etc., made in 1899.

The Farm: For census purposes, a farm is all the land cultivated under one management, whether in a single body or separate parcels.

Tenants: Tenants will be asked to give the size and value of farms rented or leased, and the value of the improvements thereon, the same as if they were owners.

 For information concerning the Twelfth Census, please address **V. R. MERRIAM, Director, Washington, D. C.**

About Lawns and Lawn Grass Seed.

FORMATION OF LAWNS FROM SEED.

In the first place, see that the ground is thoroughly drained and well prepared. The soil ought not to be too rich, as a rapid growth is not wanted in the grasses of a lawn; but in preparing it for laying down, let the surface be as much alike in quality as possible.

If the ground is in condition to raise a good crop of potatoes, it will make a good lawn; add about half a ton of bone dust to the acre, harrowed in before sowing the seed. After sowing, the seed might be raked in very slightly or just covered with a brush harrow. The ground should then be rolled in order to press the seed firmly into the soil.

The proper time to sow grass seed depends, of course, upon the latitude. In the central and eastern states from the middle of March to the middle of April is the best time, just as the last frost is leaving the ground. If sown later, the grasses may not be strong enough to stand the hot, dry summer months. Seed may also be sown in the fall, provided it is done early enough to secure a good, strong growth before winter sets in. If the young plants are not well-rooted, they are liable to be killed by frost or thrown out of the ground by the action of alternate freezings and thawings. That is the objection to fall sowing. The advantage of it is that, if the grass comes safely through the winter, it has a good start in the spring. The sowing should be done when the ground is moist, or before an expected rain, and a subsequent rolling is always advisable.

Let the ground all have a surface of about six inches alike, for nothing looks worse than to see a lawn grow all in patches. One exception, however, may be mentioned, and that is, if there be any steep slopes facing the south, or other exposed places, let the earth on them be better and deeper than on the ground level, as they are more liable to burn out.

ROLLING.—As soon as the frost is out of the ground in the spring, the land should be gone over with a heavy roller. Winter frosts loosen the soil, and rolling is necessary to compress it again. If grass seed is to be sown, this should be done first and the rolling immediately afterwards. Frequent rollings are recommended.

MOWING.—All turf-forming grasses are improved, both in vigor of root-growth and in fineness of texture, by frequent mowings. It is impossible to say just how often the grass should be mown, as that depends upon the rate at which it grows. Too close cutting should be guarded against, however, especially during the hot summer months, when the roots require some top-growth to protect them from the burning sun. For the same reason it is as well not to rake off the cut grass, as it quickly settles about the roots and forms a valuable protective mulch. A good top-growth is also necessary to protect the roots from severe winter frosts. Mowing should therefore be discontinued in time to let the grass grow pretty long before winter sets in.

TO GRASS A BANK OR TERRACE.—For each square rod, take a pound of lawn grass seed and mix it thoroughly with 6 cubic feet of good, dry garden loam. Place in a tub, and add liquid manure, diluted with about two-thirds of water, so as to bring the whole to the consistency of mortar. The slope must be made perfectly smooth, and then well watered, after which the paste should be applied, and made as even and as thin as possible.

- THE THORBURN LAWN GRASS.

For many years we sold our best lawn grass under the name of Thorburn's "Central Park Mixture," but we find that this name is now applied by many dealers to mixtures of their own, differing entirely from the article we have been furnishing. We therefore drop the name "Central Park," but we shall continue to put up the same seed under the name of "Thorburn Lawn Grass." This is distinctively our own mixture, composed exclusively of the grasses that our long experience has proved to be the most suitable for American lawns, making the most lasting turf of the richest color and finest texture. The Thorburn Lawn Grass should be sown at the rate of 4 to 5 bushels to the acre (15 lbs. to the bushel). Per quart, 25 cts.; $\frac{1}{2}$ peck, 65 cts.; peck, \$1; bushel, \$3.50. (We can also make special good mixtures at lower prices.)

THORBURN'S LAWN-RESTORING GRASS SEED.

A mixture of grasses peculiarly suited to take firm hold and grow quickly on hard, worn-out or burned spots. To restore a lawn that is partially worn-out or burned, the best time is very early in spring, as soon as the frost is entirely out of the ground. The bare spots should be well scratched or raked up, and this seed sown liberally. Cover the seed very thinly with earth, and then roll or press down firmly with the back of the spade. Some **Lawn-restoring Grass Seed** should be kept always on hand, and before every rain during the summer some of it should be sown on any part that may appear thinner than the rest. Seed may be sown in fall, as late as from 1st of September to 1st of October, according to the weather. Price per quart-box, 30 cts.; per bus. of 24 lbs., \$5.

PERMANENT GRASS SEED FOR GOLF LINKS.

On application we shall be pleased to send, free of charge, our well-known pamphlet on "The Seeding and Preservation of Golf Links" to interested parties. We invite correspondence on this subject, to which we have given much attention.

Golf Links Mixture. For the grounds in general. Per bushel of 20 lbs., \$2.50.

Putting-green Mixture. A mixture of extra fine grasses, that will make a close, firm, green and lasting turf, which will improve the more it is tramped on. Per quart, 30 cts.; peck, \$1.50; bushel of 24 lbs., \$5.

SOME CELEBRATED LAWNS FROM THORBURN'S LAWN SEED.

GEO. W. VANDERBILT'S BILTMORE ESTATE.

BILTMORE, N. C., *Feb. 23, 1899.*

MESSRS. J. M. THORBURN & Co.

Gentlemen: It is a most difficult thing to maintain a grass area in the south, but we have many acres of fine turf at Biltmore—the direct result of using your selected brands of Kentucky Blue Grass seed. Indeed, all of our purchases of seeds from your firm have been most satisfactory and our business relations most agreeable. **You have a standing advertisement at Biltmore that is viewed by thousands of visitors every year—a splendid recommendation, but, unfortunately, an advertisement not openly bearing your name.**

Truly yours,

(Signed) C. D. BEADLE,
Supt. Landscape Department, Biltmore Estate.

THE GREEN-WOOD CEMETERY.

BROOKLYN, N. Y., *Feb. 24, 1899.*

MESSRS. J. M. THORBURN & Co.

Gentlemen: I take much pleasure in stating that for a number of years we have used here large quantities of your grass seed, and **have found the various kinds used to be of the best quality and satisfactory in every respect.**

Yours truly,

(Signed) EUGENE CUSHMAN, Superintendent.

HON. JOSEPH H. CHOATE'S ESTATE.

STOCKBRIDGE, MASS., *Feb. 20, 1899.*

MESSRS. J. M. THORBURN & Co.

Gentlemen: The lawn grass seed I got from you last spring has proved itself of the highest quality, being good, clean and well mixed, and full of vitality. **I think it is the finest grass seed I have ever used.**

(Signed) CHARLES R. RUSSELL,
Supt. to Hon. Joseph H. Choate.

ESTATE OF JOHN SLOANE, ESQ., AT LENOX.

LENOX, MASS., *Jan. 27, 1899.*

MESSRS. J. M. THORBURN & Co.

Gentlemen: I am pleased to say that your grass seed has given me every satisfaction. I sowed down about seven acres (four bushels per acre), under very trying conditions of weather, and, contrary to my expectations, I now have **a lawn marvelously free from weeds**, which was the admiration of all who saw it last summer.

Yours respectfully,

(Signed) ALFRED J. LOVELESS,
Gardener to John Sloane, Esq.

THE REEF, NEWPORT.

NEWPORT, R. I., *Jan. 28, 1899.*

MESSRS. J. M. THORBURN & Co.

Gentlemen: I have had splendid success with your special grass mixture, as well as your lawn-restoring grass seed, and I am satisfied that **a cleaner or better mixture cannot be gotten anywhere.**

Yours truly,

(Signed) HERMAN LIPS,
Gardener to T. M. Davis, Esq.

HON. WM. C. WHITNEY'S WESTBURY ESTATE.

WESTBURY, L. I., *Jan. 14, 1899.*

MESSRS. J. M. THORBURN & Co.

Gentlemen: **The fifty acres sown with your lawn grass seeds have turned out a great success.** During a long experience I have used large quantities of lawn seed, supplied by many leading firms, both on this and the European Continent, and I certainly have never seen better results than those obtained from your seed. I have had many inquiries as to where I obtained the seed, and I have no doubt my reply will bring you many new customers.

Yours respectfully,

(Signed) H. J. CORFIELD,
Supt. to Hon. W. C. Whitney.

ALLEN WINDEN FARM, LENOX, MASS.

LENOX, MASS., *Feb. 2, 1899.*

MESSRS. J. M. THORBURN & Co.

Gentlemen: I am particularly pleased with the lawn grass mixture supplied by you last year. It came up very quickly and was entirely free from weeds, and **gave us better results than any other seed we ever bought.** I am glad of the opportunity of giving you my opinion of it.

Yours truly,

(Signed) A. H. WINGETT,
Supt. for Chas. Lanier, Esq.

ESTATE OF GIRAUD FOSTER, ESQ., LENOX, MASS.

LENOX, MASS., *Jan. 30, 1899.*

MESSRS. J. M. THORBURN & Co.

Dear Sirs: In the fall of 1897, I sowed some eight acres with your Central Park mixture of lawn grass, and I am pleased to state that the result was highly satisfactory. **I cannot speak too highly of its growth and purity.**

Yours truly,

(Signed) E. JENKINS,
Gardener to Giraud Foster, Esq.

GRASS SEED MIXTURES.

FOR MEADOWS AND PASTURE.

For nearly a hundred years our house has made a specialty of grasses. We were probably the first to introduce to this country, for commercial distribution, the many valuable natural and cultivated foreign species that now take such an important part in our agricultural economy. The formation of permanent pastures and meadows has for many years been a subject of careful study with us, and the following formulæ for seeding grasslands have received universal recognition.

It is a well-ascertained fact, fully recognized by all successful agriculturists, that a thicker and more prolonged growth is produced by a mixture of many sorts of grasses than by only one or two, and that a combination of grasses may thrive on a piece of ground on which any one of them would succeed indifferently.

For every different kind and condition of soil there is a large number of grasses, either indigenous or introduced, which are especially suitable. Some sorts do best on high ground and in dry weather; others prefer plenty of moisture. Some mature so early, and others so late, that from the beginning of spring until winter sets in, there is no time when one species or another is not at its best. *The quantities given are the minimum, and may often be increased to advantage.*

GRASS SEEDS.

We desire to call particular attention to the fact that Grass Seeds are sold in the trade by sample, and each sort is divided into three or four grades of quality, according to purity, germination and weight. The price of the best grade is often double that of the ordinary. The Grass Seeds here offered by us are in every case the **VERY HIGHEST GRADES**.

 The prices of some varieties may change as the season advances.

AGROSTIS VULGARIS. (Red Top.)

AGROSTIS CANINA (*Rhode Island Bent Grass*). Resembles Red Top (*A. vulgaris*, described below), but is of dwarfer habit, with shorter and narrower leaves. It makes a beautiful, close, fine turf, and is one of the very best grasses for lawns. It adapts itself to almost any soil, rich and moist, or dry, sandy and sterile. It is a native of Europe, but has been cultivated in our eastern states for many years, being valuable for permanent pastures. Of late years we have been unable to obtain true and pure seed of it here, the meadows from which it is saved having run largely into the freer seeding Red Top. We now import it from Europe, where it has been more carefully cultivated. 50 pounds of seed to the acre is recommended for lawns. Height, 1 to 2 feet. (12 lbs. to the bushel.) Per lb., 30 cts.; 100 lbs., \$25.

AGROSTIS STOLONIFERA (*Creeping Bent, or Fiorin*). The distinctive feature of this species is, as the name implies, its compact, creeping, rooting stems. It prefers low sandy. It is of rapid growth and spreading habit, and the stoloniferous roots form a strong, enduring turf, that is positively improved by constant trampling. Being of fine texture, it is one of the most valuable of our lawn grasses. If sown alone, 50 lbs. to the acre should be used. Height, 1 to 2 feet. (15 lbs. to the bushel.) Per lb., 30 cts.; 100 lbs., \$25.

AGROSTIS VULGARIS (*Red Top; Herd's Grass*). A very hardy native perennial grass, succeeding best on moist land. It accommodates itself to a variety of soils, however, even to quite dry situations, and stands our hot climate admirably. It is, perhaps, the most permanent grass we have, and it enters largely into the composition of our best natural pastures. It remains green for the greater part of the year, and its long, trailing stems form a very close, matting turf, that is not affected by trampling. It grows well as far south as Tennessee. Height, 1 to 2 feet. The seed, as usually sold, weighs 14 pounds to a bushel. The bulk of this is, of course, chaff, and 4 bushels of it would be required to sow an acre. The absolutely clean or "fancy" seed offered below weighs over 30 lbs. to the measured bushel, and 30 lbs. of it is sufficient to sow an acre. Per lb., 15 cts.; 100 lbs., \$10.

Fancy Heavy Red-top Grass. Absolutely clean and free from chaff. 30 lbs. to the acre. Per lb., 25 cts.; 100 lbs., \$20.

AIRA CÆSPITOSA (*Haddock Grass*). A coarse grass, preferring stiff and marshy bottoms, and thriving in moist and shady woodlands. In England door-mats are formed of it by the cottagers. 30 lbs. to the acre. Per lb., 25 cts.; 100 lbs., \$20.

AIRA FLEXUOSA (*Wood Hair Grass*). Delights in high and rocky hills; is of little agricultural value, except for sheep pasture. 30 lbs. to the acre. Per lb., 20 cts.; 100 lbs., \$18.

ALOPECURUS PRATENSIS (*Meadow Foxtail*). One of the best permanent pasture grasses for rich, moist lands. Its chief characteristics are its extreme earliness and its faculty of standing high summer heats without burning. Although it prefers moist, low grounds, yet it accepts drier situations, and makes an earlier spring verdure than any other variety. It should be sown only in connection with other grasses, 3 or 4 pounds to the acre. Height, 2 to 3 feet. (7 lbs. to the bus.) Per lb., 35 cts.; 100 lbs., \$30.

AMMOPHILA ARUNDINACEA (*Beach Grass*). Valuable on the sandy seashore, canal and railway banks, etc. Its strong creeping, matting roots bind the drifting sand into natural embankments against the action of wind and waves. This grass is usually propagated by transplanting in the fall. Where it is necessary to use seed, it should be sown in the spring, and the ground covered with brush to hold the seed in place until it has taken firm hold. Height, 2 to 3 feet. Per lb., 45 cts.; 100 lbs., \$40.

AVENA ELATIOR. (Tall Meadow Oat Grass.)

GRASS SEEDS—continued.

ANTHOXANTHUM ODORATUM (*True Perennial Sweet Vernal Grass*). For a mixture with pasture grasses, it is valuable on account of its vernal growth, and also for continuing to throw up root foliage until late in the autumn. For meadows, its chief merit is the fragrant odor which the leaves emit when partially dried, thus sweetening hay. It is a vegetable condiment, rather than a grass of much nutritive value, and in mixtures for hay only a small proportion of it should be used. From 2 to 3 lbs. to the acre when mixed with other sorts. Per lb., 60 cts.; 100 lbs., \$55.

ANTHOXANTHUM ODORATUM PUELLI (*Annual Sweet Vernal Grass*). Much smaller than the perennial, and of much less value, lasting one year only. 20 to 25 lbs. to the acre. Per lb., 20 cts.; 100 lbs., \$15.

ARRHENATHERUM AVENACEUM (*Tall Meadow Oat Grass*). See *Avena elatior*.

AVENA ELATIOR (*Tall Meadow Oat Grass*). Most valuable for pastures on account of its early and luxuriant growth; it produces an abundant supply of foliage, which is relished by cattle, early and late. For hay it may be cut twice a year, and for green soiling it may be cut four or five times in favorable seasons. It is very hardy, and withstands extreme drought and heat and cold. It is very valuable for our southern states, where it is extensively cultivated for winter grazing and for hay. Height, 2 to 4 feet. 50 lbs. to the acre. (13 lbs. to bushel.) Per lb., 25 cts.; 100 lbs., \$18.

AVENA FLAVESCENS (*Yellow Oat Grass*). Will not thrive well when sown alone, but with other species it becomes desirable for dry meadows and pastures. About 25 lbs. to the acre. Per lb., \$1; 100 lbs., \$85.

BEACH GRASS. See *Ammophila arundinacea*.

BERMUDA GRASS (*Cynodon dactylon*). A most valuable grass for our southern states, both for pasture and lawns. It is of dwarf habit, with long creeping stems, rooting at the joints and covering the ground with a matting of fine turf, which no amount of trampling will impair. It is also useful for binding drifting sand and for steep embankments subject to wash. When once established it is difficult to eradicate, and is therefore unsuitable for temporary pastures. As it cannot endure frost, it is of no value north of Virginia. It thrives in the poorest and sandiest soil, and resists extreme drought and the most intense tropical heat. It should be sown at the rate of 15 lbs. to the acre. Per lb., 80 cts.; 100 lbs., \$70.

BLUE GRASS, CANADA. See *Poa compressa*.

" " **ENGLISH.** See *Festuca pratensis*.

" " **KENTUCKY.** See *Poa pratensis*.

BROMUS INERMIS (*Awnless, or Smooth Brome Grass*). An erect perennial, 3 to 5 feet high, native of Hungary, where it is considered one of the best hay grasses, yielding a good return in the arid and silicious soil. The nutritive quality of its hay, however, is much inferior to that of our standard native sorts, so that we should recommend it only for dry, arid soils, where the better and more delicate grasses would not grow. It has been found to do well in the semi-arid regions of the west and northwest on account of its remarkable drought-resisting powers, while its extreme hardness recommends it for the colder sections of Canada. It is strongly stoloniferous, its creeping rootstocks spreading rapidly under ground and giving out new plants. It is on this account undesirable for temporary meadows, being difficult to eradicate when once established. Sow 35 or 40 lbs. to the acre. Per lb., 25 cts.; 100 lbs., \$18.

BROMUS MOLLIS (*Soft Chess*). This annual grass is so called because its stems and leaves are downy and soft to the touch. In good soil it rapidly produces an abundant forage, but of poor quality, and little relished by cattle. It can be recommended only for poor, sandy soil, where grasses of better quality would not grow. 30 lbs. to the acre. Per lb., 20 cts.; 100 lbs., \$15.

BROMUS PRATENSIS (*Meadow Brome Grass*). A hardy perennial, 2 to 3½ feet high, much used in mixtures for meadows, both for mowing and pasture. It is not recommended to be sown alone except in poor soil, on dry and stony hillsides, where better grasses will not grow. It withstands extreme cold and drought, and if cut before flowering it makes a good hay. If left to grow older, it becomes very tough and indigestible. 30 lbs. to the acre. Per lb., 25 cts.; 100 lbs., \$20.

BROMUS SCHRADERI (*Rescue Grass*). In good, rich soil several crops have been cut in a season. It cures into hay of fair nutritive quality, but heavy and difficult to eat. For pasture, or for cutting and feeding green, it is more suitable. When first introduced it was claimed to be enormously productive, yielding five heavy crops in a year, but this and other claims of superiority have not been borne out, and the grass is not now so largely grown. Height, 1 to 2 feet. 30 lbs. to the acre. Per lb., 30 cts.; 100 lbs., \$25.

CALAMACROSTIS ARENARIA. See *Ammophila arundinacea*.

CYNOSURUS CRISTATUS (*Crested Dog's-tail*). A stoloniferous perennial, forming a smooth, compact and lasting turf. It thrives best on rich, moist land, but it can accommodate itself to almost any soil. Its roots penetrate deeply into the ground, which enables it to stand severe droughts. It is, on this account, valuable for hilly situations. It makes a good bottom grass and is very nutritious, and is therefore valuable in mixtures for permanent pastures. It thrives well in the shade, and is valuable for shaded parts of lawns. If sown alone 30 pounds to the acre is none too much, but it is recommended only in mixture with other sorts. Height, 1 to 2 feet. Per lb., 40 cts.; 100 lbs., \$35.

BROMUS INERMIS.

DACTYLIS GLOMERATA (Orchard Grass).

best in moist, alluvial and strong clayey soils. It is very productive and of long duration, and is especially valuable for permanent pasture. Stock of all kinds eat it readily, and its nutritive value is said to be very great. On rich, moist lands it yields a large amount of hay of excellent quality. It is not suitable for lawns. Height, 3 to 4 feet. 40 lbs. to the acre. Per lb., 30 cts.; 100 lbs., \$25.

FESTUCA FLUITANS (*Floating Fescue*). A perennial with long, creeping roots, and preferring a rich, muddy or alluvial soil. It is found in ditches, shallow ponds, sides of rivers and lakes, and in boggy and marshy ground. As trout and wild ducks are very fond of the seeds and tender shoots, it is often introduced on the margins of ponds and rivers with the view of affording them nourishment. Per lb., 35 cts.; 100 lbs., \$30.

FESTUCA HETEROPHYLLA (*Various-leaved Fescue*). A very early hardy perennial, 2 to 3 feet high, thriving best in cold, moist soils that are rich in humus and potash. In such soils it yields heavily and is valuable in grass mixtures for permanent meadows, either for mowing or grazing. Its great production of root leaves makes it an excellent bottom grass. Its nutritive value is said to be very high. It grows very well in the shade, and it is highly recommended for shaded lawns and woodland parks. 40 lbs. to the acre. Per lb., 30 cts.; 100 lbs., \$25.

FESTUCA OVINA (*Sheep's Fescue*). This grass is a native both of America and of Europe. In our northwestern states there are many varieties of it, some of which grow 2 to 3 feet high. It prefers dry uplands, and thrives in poor, shallow, gravelly soils where other grasses would fail. It is very hardy, resisting extremes of heat and cold. Though of dwarf growth, it grows thickly, yielding a large amount of very nutritious herbage, which is much relished by sheep. In grass mixtures for pasture on high and dry lands it is especially valuable. Though a "bunch grass," it may be included in lawn mixtures on account of its fine foliage and dwarf, dense growth. Height, $\frac{1}{2}$ to $1\frac{1}{2}$ feet. 35 lbs. to the acre. Per lb., 25 cts.; 100 lbs., \$18.

DACTYLIS GLOMERATA (*Orchard Grass; Cocksfoot*).

One of the grasses most employed in permanent meadows, either for pasture or for mowing. It is very hardy and succeeds well anywhere in the United States. It is very productive and makes excellent hay. If cut before it flowers it is less hard and the pith of the stem is soft and sweet. It blossoms about the same time as Red Clover, and is therefore desirable in mixture with that plant. Stock of all kinds are very fond of it, either dry or green, and it endures constant cropping better than any other grass. After being mown it grows up quicker and yields a heavier aftermath than any other variety. It can stand considerable shade, and is recommended as a pasture grass for woodlands. Its tendency to grow in tussocks is diminished if it is sown with other grasses, and also by heavy rolling in the spring. But it is quite unsuitable for lawns. Height, 3 feet. (14 lbs. to the bushel.) Sow 3 or 4 bushels to the acre. Per lb., 20 cts.; 100 lbs., \$16.

DOG'S-TAIL. See *Cynosurus cristatus*.

ELYMUS ARENARIA (*Lime Grass*). Valuable on the sandy seashore, canal and railroad banks, etc. It tends, with its tough, wide-spreading and thickly matting roots, to form natural and permanent embankments, thus serving to prevent the drifting of the sand and to protect an exposed shore from wind and waves. It is of no agricultural value. Per lb., 45 cts.; 100 lbs., \$40.

FESTUCA DURIUSCULA (*Hard Fescue*). This is a variety of *F. ovina*, dwarfed and less vigorous in growth, but possessing all the other valuable characteristics of that variety. It is emphatically a grass for dry lands, doing well on sandy and shallow silicious soils. It is exceedingly hardy and withstands extremes of heat and cold, and also long periods of drought. For permanent pastures on poor lands it is especially valuable, but it may also be used in meadow mixtures for well manured clayey lands. In the latter case it has been known to yield a good crop of excellent hay and a very large aftermath. On account of its stooling habit it is not recommended for lawns. Height, 1 to 2 feet. 30 lbs. to the acre. Per lb., 25 cts.; 100 lbs., \$18.

FESTUCA ELATIOR (*Tall Meadow Fescue*). This grass is a native of Europe, but was long ago introduced to this country and is now naturalized and widely grown here. It succeeds

FESTUCA RUBRA. (See opposite page.)

GRASS SEEDS—continued.

FESTUCA PRATENSIS (*Meadow Fescue*, or *English Blue Grass*). One of the grasses most used in permanent or temporary meadows for mowing or for pasture. It succeeds best in cold, moist, light soils, in well-drained meadows and in low valleys rich in organic matter. It should not be grown at all in warm, dry land. It does not reach its full development till the second or third year, when it far exceeds most other sorts in the quantity of its produce and nutritive matter. After being mown it grows again very quickly. The forage, either green or dried, is very nourishing and much relished by cattle, especially when it has been cut young. Height, 2 feet. 40 lbs. to the acre. Per lb., 18 cts.; 100 lbs., \$13.

FESTUCA RUBRA (*Red*, or *Creeping Fescue*). A creeping-rooted species, forming a close and lasting turf, and specially adapted for dry, sandy soils. It resists extreme drought, and thrives on very inferior soils, gravelly banks and exposed hillsides. It is also valuable for binding shifting sands on the seashore. As a lawn grass, its chief merit is for positions too shaded for better sorts. 25 lbs. to the acre. Per lb., 25 cts.; 100 lbs., \$20.

FESTUCA TENUIFOLIA (*Slender Fescue*). This is really a variety of *Festuca ovina*, with much finer leaves. It will grow on very dry and inferior soil, and its dwarf habit of growth and fineness of leaf render it not unsuitable for dry slopes on lawns. It stands grazing well, is very hardy and lasts long, and may therefore be recommended for permanent pasture on high and dry situations. 30 lbs. to the acre. Per lb., 40 cts.; 100 lbs., \$35.

FOX-TAIL. See *Alopecurus pratensis*.

HOLCUS LANATUS (*Meadow Soft Grass*; *Velvet Grass*). This grass is not of much agricultural value, except on peaty or sandy soil, where better sorts will not grow. It is perennial, very hardy and grows rapidly. As a forage plant it is not of the first order, its nutritive value being small; yet it makes a hay that is eaten readily by cattle, especially when it is sprinkled with salt. Height, 1 to 2 feet. 35 lbs. to the acre. Per lb., 25 cts.; 100 lbs., \$20.

HUNGARIAN GRASS. See *Panicum Germanicum*.

JOHNSON GRASS. See *Sorghum Halepense*, page 58.

LOLIUM PERENNE (*Perennial Rye Grass*). Although called a perennial, it seldom lasts more than three or four years. It is the most valuable grass of Great Britain, both for pastures and for meadows, occupying there the same relative position of importance that Timothy holds here. The cool, moist climate of England seems to suit it best, yet it succeeds very well in our middle and eastern states, and adapts itself to a great diversity of soils. The seed is large and heavy, and produces a strong, verdant growth in four or five weeks after sowing. It cures into a hay that is rather hard, but having a sweet flavor, and much relished by cattle and horses. Its nutritive value, especially in mixture with Red Clover, is very great. It is excellent in mixtures for quick effects in lawns. Height, 1½ to 2 feet. 60 lbs. to the acre. Per lb., 12 cts.; 100 lbs., \$7.

LOLIUM ITALICUM (*Italian Rye Grass*). Though lasting two or three years under very favorable circumstances, it is practically an annual. Like the Perennial Rye Grass, it is a remarkably rapid grower, and has, in addition, the advantage of standing extremes of temperature, remaining green throughout the winter, and retaining its freshness in the hottest summer months and during prolonged droughts. When sown very thickly, or in mixture with other sorts, it makes a good, dense turf, and it has been used with much satisfaction on lawns as far south as Jacksonville. On rich, moist soils it is exceedingly productive, yielding an abundant cutting in four or five weeks after sowing, and every six weeks after that until late in the fall. For temporary meadows, on soils that are neither too stiff nor too dry, it is one of our most valuable grasses. Height, 1½ to 2½ feet. 50 lbs. to the acre. Per lb., 12 cts.; 100 lbs., \$7.

OAT GRASS. See *Avena elatior*.

ORCHARD GRASS. See *Dactylis glomerata*.

PHALARIS ARUNDINACEA (*Reed Canary Grass*). A very hardy perennial, preferring stiff, wet land, but also doing fairly well in dry, sandy soils. It grows well in ditches and by river sides, where its strong, creeping rootstocks render it valuable for binding the banks. Its seed also affords food for trout and wild fowl. When young it may be cut for green forage for cattle, but in its more matured state it is too coarse for this purpose. Per lb., 75 cts.; 100 lbs., \$65.

FESTUCA PRATENSIS (Meadow Fescue).

LOLIUM PERENNE (Perennial Rye Grass).

GRASS SEEDS—continued.

PANICUM GERMANICUM (*Hungarian Grass*). One of the most valuable annual soiling plants. It grows on any ordinary soil; withstands drought well. As it is of very rapid growth, being ready for cutting within sixty days, it may be sown in this latitude as late as middle of July for hay, or middle of August for green fodder. It should be cut just before blooming. Sow 1 to 1½ bushels to the acre. (50 lbs. to the bushel.) Price variable.

PHLEUM PRATENSE (Timothy).

grasses will not grow. It is very permanent and hardy, resisting extremes of heat and cold, and is one of the first grasses to show a rich green growth in the spring. The creeping roots are formed underground, and make a good turf. It is excellent for pasture, and in good soil grows tall enough for hay. 30 lbs. to the acre. Per lb., 40 cts.; 100 lbs., \$38.

POA PRATENSIS (*Kentucky Blue Grass*; *June Grass*). One of our most widely distributed and valuable native grasses. It combines more points of excellence than any other sort. It is a true perennial, lasting indefinitely and improving every year. Its densely creeping rootstocks, spreading habit, and smooth, even growth, fine texture and rich green color render it one of the very best grasses for lawns. It forms a close turf, starts very early in the spring, and lasts till frost. It succeeds in almost any soil, dry, rocky, sandy or gravelly, and stands long-continued dry weather and hot suns. It takes, however, two or three years to become well established, and should, therefore, be sown only in connection with other grasses. If the soil is specially suitable it will eventually crowd these out, and make the finest possible sward. It is one of our most valuable pasture grasses, very productive and nutritious. Height, 9 to 18 inches. (14 lbs. to the bushel.) 3 bushels to the acre. Per lb., 15 c.; 100 lbs., \$12.

POA TRIVIALIS (*Rough-stalked Meadow Grass*). A spreading, thickly matting, stoloniferous-rooted species, forming a fine turf, and well adapted for the more shaded portions of lawns. It thrives on rich, moist soil, and in sheltered situations, but does not do well on dry land. It is very valuable for forming bottom grass in mixtures for permanent pastures. Height, 1 to 3 feet. 20 lbs. to the acre. Per lb., 40 cts.; 100 lbs., \$38.

RED TOP. See *Agrostis vulgaris*.

RESCUE GRASS. See *Bromus Schraderi*.

RYE GRASS. See *Lolium Italicum* and *Lolium perenne*.

RHODE ISLAND BENT GRASS. See *Agrostis canina*.

SWEET VERNAL GRASS. See *Anthoxanthum odoratum*.

TIMOTHY. See *Phleum pratense*.

PHLEUM PRATENSE (*Timothy*). A native of Europe, but long ago naturalized in America, where it ranks as by far the most important of hay grasses. Its popular name, by which it is now known the world over, refers to Timothy Hanson, who did most to make it known and appreciated. On moist, loamy or clayey soil it produces a larger hay crop than any other grass. It is not so well suited for light, sandy soils. Though preferring a moist, temperate climate, it withstands droughts and extreme heat and cold. Its hay is very nourishing and can be preserved for a long time. It should be cut when flowering, as if left later the hay becomes hard and coarse. It is often sown along with Red Clover, and the nutritive value of the hay is greatly increased by this mixture. Height, 2 to 3 feet. If sown alone, at least one-half bushel to the acre should be used. The seed weighs 45 lbs. to the bushel. Several grades are always on the market, differing in purity and vitality. It is always most economical to buy the highest grade, known as "Fancy." Market price.

POA AQUATICA (*Water Meadow Grass*). This is an excellent pasture grass for very wet situations. It also does well in bogs and marshes, and is useful in the same way as *Festuca fluitans*. 20 lbs. to the acre. Per lb., 40 cts.; 100 lbs., \$35.

POA COMPRESSA (*Canada Blue Grass*). A very hardy perennial grass, with creeping rootstocks, forming a close and durable turf of fine texture. It grows on the poorest and driest soils, sandy, gravelly or clayey, standing extremes of wetness or drought, and keeping green till the severe frosts of winter. It is said to be especially valuable for dairy pastures, cows feeding on it yielding the richest milk and finest butter. It is distinguished from the Kentucky Blue Grass by its flattened, wiry stems and by its decidedly bluer color. Height, 6 to 18 inches. (14 lbs. to the bushel.) 3 bushels to the acre. Per lb., 18 cts.; 100 lbs., \$11.

POA NEMORALIS (*Wood Meadow Grass*). The chief characteristic of this grass is its special fitness for shaded positions in lawns and woodland parks, where other

POA NEMORALIS (Wood Meadow Grass).

CLOVERS.

 Subject to change of price. Our quotations are those ruling at this time.

ALFALFA, or LUCERNE (*Medicago sativa*). One of the most valuable and largely grown forage plants. It requires a deep, rich, well-drained soil. It roots very deeply, the tap-root descending often to a depth of 10 or 15 feet in loose soil. It is consequently capable of resisting great droughts. In the west it is the best crop for hay or for soiling. It should be sown alone, in thoroughly prepared deeply plowed soil, at rate of 15 to 25 lbs. to the acre. The crop should be cut when the plant is coming into bloom. In suitable soil the plant is perennial, and several crops may be cut every year. Height, 1 to 3 feet. Per lb., 20c.; 100 lbs., \$15.

ALSIKE, or HYBRID CLOVER (*Trifolium hybridum*). A perennial 1 to 3 feet high, succeeding best in cold and stiff soils, and in marshy lands which are too wet for other species. It grows well in the far north and in high altitudes, and can withstand severe cold. It is recommended as a honey plant for bees. 12 lbs. to the acre. Per lb., 22 cts.; 100 lbs., \$18.

BOKHARA CLOVER (*Melilotus alba*). A most valuable sort for soiling. It grows from 3 to 5 feet high, and if sown in rich soil may be cut three times; lasts two years or more if cut before flowering; good for ensilage and bees. 10 lbs. to the acre. Per lb., 25 cts.; 100 lbs., \$20.

EGYPTIAN CLOVER (*Trifolium Alexandrinum*). Yields heavily in Egypt, and would likely do well on irrigable land in warm countries. It is as productive as Lucerne, and grows a little taller. 10 lbs. to the acre. Per lb., 35 cts.; 100 lbs., \$30.

CRIMSON, or SCARLET CLOVER (*Trifolium incarnatum*). Erect annual, 1 to 2 feet high, with bright scarlet flowers. It is a native of southern Europe, and is now largely grown in our southern states for improving the soil by turning under. In Virginia and southwards it is sown in the autumn for winter and early spring forage. It will not stand severe frost and cannot be depended upon to stand the winter north of New Jersey. It makes a very valuable crop for soiling, pasturage or green manure. For hay it should be cut when in full bloom. Sow 20 lbs. to the acre. Price variable.

CRIMSON, or SCARLET CLOVER (*Trifolium incarnatum*).

JAPAN CLOVER (*Lespedeza striata*). A perennial, growing about 12 inches high; valuable only in southern localities, where it thrives in any soil and in the driest season; it makes a fair hay, and stock eat it readily when green. It is also valuable for turning under as green manure. Sow in spring broadcast at rate of 30 lbs. to the acre. Per lb., 30 cts.; 100 lbs., \$25.

KIDNEY VETCH, or SAND CLOVER (*Anthyllis vulneraria*). A deep-rooted, herbaceous hardy perennial plant, valuable for dry sands and inferior soils, upon which Red Clover will not thrive. Eaten with avidity by sheep, cattle and horses; useful in mixture for dry soil. Produces abundantly of hay and seed. Sow 20 lbs. to the acre. Per lb., 25 cts.; 100 lbs., \$22.

RED CLOVER, MEDIUM (*Trifolium pratense*). One of the most valuable farm crops of the eastern states for pasture, soiling, hay, or for turning under for green manure. It requires a deep, rich soil, and yields two hay crops in the season. In this section it should be sown in the spring at rate of 12 to 15 lbs. to the acre. Price variable.

KIDNEY VETCH, or SAND CLOVER (*Anthyllis vulneraria*).

MAMMOTH RED, or PEA VINE CLOVER (*The English Cow Grass*). Grows much larger and lasts longer than the common Red Clover; most valuable for plowing under. 10 lbs. to the acre. Price variable.

WHITE CLOVER (*Trifolium repens*). Some White Clover is usually included in lawn grass mixtures. It makes an excellent turf that stands constant trampling. It is of dwarf habit, the stems creeping and rooting at the joints. It spreads rapidly, and is very hardy, resisting extremes of heat and cold, dryness and humidity, and accommodating itself to all kinds of soils. It is valuable in mixtures for permanent pastures, its forage being very sweet and nutritious and much relished by cattle. The seed should be sown in the spring. In mixtures, 1 or 2 lbs.; if alone, 8 or 10 lbs. to the acre. Per lb., 25 cts.; 100 lbs., \$20.

YELLOW SUCKLING CLOVER (*Trifolium filiforme*). Native of northern Europe. Prefers sandy clay soils; valuable for sheep pastures; recommended in grass mixtures for wet, sandy meadows. Per lb., 35c.; 100 lbs., \$30.

YELLOW TREFOIL (*Medicago lupulina*). An annual or biennial suitable for pasture in wet meadows or for stiff, clayey soils which are too poor for Red Clover. 15 lbs. to the acre. Per lb., 20 cts.; 100 lbs., \$12.

STRAWBERRY PLANTS.

Layer plants can be had in Spring and again in Fall. Pot-grown plants ready after July 15.

	Layer, per 100	Pot- grown, per 100
Beder Wood. Very early and productive; large, conical, bright red color, and of excellent quality..	\$1 00	\$3 00
Bismarck. Large, firm, brilliant scarlet berries of fine quality; vigorous, and very prolific.....	1 00	3 00
Brandywine. Large, roundish conical, glossy crimson, firm and solid; of fine, aromatic flavor. Plant vigorous and productive; succeeds on any soil. Mid-season to late.....	1 00	3 00
Bubach No. 5. A very large berry of dark color. Productive; of fair flavor; largely grown for market. Mid-season.....	1 00	3 00
Clyde. Very regular, bright scarlet berries; large, and of excellent flavor; firm, and a good shipper. Plant remarkably healthy, vigorous and productive. Season early.....	1 00	3 00
Excelsior. Very early, large, good color, firm and of fine quality. A vigorous grower and very productive.....	1 00	3 00
Gladstone. Large, early and of good quality. Color red, with red flesh, solid.....	1 00	3 00
Glen Mary. Of large size. Bright, glossy crimson, of fine flavor; plant is strong and healthy, very prolific and on good soil the berries are large to the end of the season. Early....	1 00	3 50
Johnson's Early. A fine new extra-early, large size, deep red color; glossy, firm, sweet and of excellent flavor.....	1 00	3 00
Marshall. Large, dark crimson, good; plant luxuriant, but needs rich soil and careful culture. Mid-season.....	1 00	3 00
Nick Ohmer. Very large size, dark glossy red, firm and of excellent flavor. Vigorous grower and very productive....	1 00	3 00
Sharpless. Demands rich, strong soil; plant large and vigorous; berries very large, irregular in shape, crimson, moderately firm and of good quality. Mid-season.....	1 00	3 00
Success. Early, large, bright crimson color, high flavor and continues bearing a long time.....	1 00	3 00

Sweet Fodder Corn. (Measured bushel.)		2 00
Thoroughbred White Flint. Of spreading habit; not more than one kernel should be left to grow in a hill. Its great suckering habit, breadth of blade and smallness of stalk recommend it as the most valuable, both for fodder and ensilage.....	15	1 75
Pop Corn.		In ears, per lb., 10 cts...

N. B. We can supply selected specimen ears of many varieties of Field Corn at 5 cts. each, \$4 per 100.

MISCELLANEOUS CEREALS.

All subject to change in price.

	Per qt.	Bus.
BARLEY (48 lbs. to bushel). 2 bushels to the acre—		
Champion Vermont. An early and prolific variety	Price variable; about \$0 10	\$1 25
BUCKWHEAT (48 lbs. to bushel). 1 bushel to the acre—		
American Silver Hull. Earlier and more productive than the common	15	1 40
Japan. Enormously productive; the grains are much larger than those of any other variety	15	1 40
MILLETS (50 lbs. to bushel)—		
Japan Barn-Yard (<i>Panicum Crus-galli</i>). Excellent for fodder; very productive. Less harsh and woody than any other tall-growing Millet. In recent experiments it yielded 7,800 lbs. of well cured hay to the acre. 1 bushel to acre	Per lb., 15 cts.; 100 lbs., \$7..	
Hungarian. Most valuable soiling plant. Good also for hay or green fodder. Grows in any ordinary soil, and withstands drought well. May be sown in this latitude as late as the first of July. 1 to 1½ bushels to the acre. Price variable.		
Golden. Useful in the same way as the Hungarian. The seed is also largely grown for feeding birds.....	Per lb., 10 cts.; 100 lbs., \$4..	
OATS. All the approved sorts furnished. 2 to 3 bushels to the acre—		
RYE (56 lbs. to bushel). 1 to 1½ bushels to acre—		
Winter Excelsior	15	1 25
Spring. Price variable.		
WHEAT, WINTER (60 lbs. to bushel). About 1½ bushels to acre—		
Red Clawson	per bus., \$1 75	
White No. 6.	1 75	
Red Poole	per bus., \$1 75	
Red Cross	2 00	
Carman No. 1. By parentage half wheat, half rye. Heads compact, symmetrical, pointed, bearded. Three grains to a spikelet, eight spikelets to a side. Kernels hard, dark amber. As early as rye; very hardy.....	per lb., 20 cts.; per bus., 5 00	

Forage, Economical and Miscellaneous Seeds.

 All subject to change in price.

ASPERULA odorata (*Waldmeister*). Perennial, about 6 inches high; very fragrant flower. In Germany it is thought much of as imparting a certain bouquet to Rhine wine, making the well-known *Maitrank*. Per pkt., 10 cts.; per oz., 60 cts.

SOJA BEAN.

AUSTRALIAN SALT-BUSH (*Atriplex semibaccatum*). A valuable forage plant recently introduced by the University of California. Experiments show that it thrives in soils on which nothing else will grow, and it is recommended highly for alkali soils and all regions subject to periodical drought. It is very nutritious, and good for all kinds of live stock. One pound of seed is sufficient for an acre. The soil should be well plowed and harrowed. The seed may be sown in garden bed and the seedlings planted out when 2 inches high, 7 or 8 feet apart. Per oz., 15 cents; per lb., \$1.50. Special quotations for large quantities.

BEANS—Common English Horse Bean. Per qt., 20 cts.; per bus., \$3.50.

Soja Bean (*Soja hispida*; *Glycine hispida*). The haulm is stiff, and the pods are produced in clusters of from two to five, and contain each four smooth, oval, nankeen colored seeds. Thrives well in hot and dry weather; very valuable for the south, for either man or beast. It is planted at rate of $\frac{1}{2}$ bushel to the acre, in drills $2\frac{1}{2}$ to 3 feet apart, and cultivated about the same as Indian corn. It does not make very good hay, but is excellent as ensilage or green fodder. The feeding value of the Bean is very great. Per qt., 20 cts.; per bus., \$3.

Velvet Bean (*Dolichos multiflorus*). Used by the farmers in Florida and Louisiana as a forage plant, and also as a fertilizer plant for turning under just in the same way as the Cow Pea. Stock readily eat the vines and leaves, and the Beans when ground with or without the pod, are used in place of oats or corn, and sometimes mixed with them. It is claimed that as a fertilizer for orange groves the Velvet Bean is unequaled. It is planted in rows 4 feet apart and 1 foot in the row, 2 or 3 beans in a place,

as soon as danger of frost is past. The yield is from 20 to 35 bushels to the acre. Per qt., 20c.; per bus., \$3.

BEGGAR-WEED (Florida or Giant Beggar-weed; *Desmodium tortuosum*). An erect leguminous annual, growing from 3 to 8 feet high, with abundant foliage, valuable as forage or for soil renovation in subtropical regions. It is highly recommended for improving light, sterile, sandy soils by plowing under, and it also makes hay of a fine quality. It should be sown at the rate of 10 pounds of clean seed to the acre, after the ground is warm and moist. The seed should be but very lightly covered. If for hay, it should be cut just as it begins to bloom. Per lb., 50 cts.; per 100 lbs., \$40.

BROOM CORN (12 quarts to the acre). Broom Corn succeeds in a good, deep soil, fresh but not damp; it is very sensitive to cold.

Long-brush Evergreen. Per lb., 15 cts.; per 100 lbs., \$7.

Improved Dwarf. Per lb., 15 cts.; per 100 lbs., \$8.

Early Japan. Per lb., 15 cts.; per 100 lbs., \$8.

California Golden Long-brush. Grows from 12 to 14 feet high. Per lb., 15 cts.; per 100 lbs., \$7.

BROOM—Scotch (*Genista scoparia*). The young growth of this shrub is chiefly valuable as food for sheep and other animals in winter. It is also employed for the making of coarse brooms. Per oz., 10c.; per lb., 50c.

BURNET—Common Field (*Poterium sanguisorba*). Perennial; makes excellent pasture for sheep; grows on the poorest ground—on dry, sandy or calcareous soil; resists the extremes of heat or cold. Sow in April, and again in September, with Sainfoin, Clover, Rye Grass, etc., 30 lbs., to the acre. Per lb., 20c.; per 100 lbs., \$12.

CANAIGRE (*Rumex hymenosepalus*). Used in the tanning of leather. Per pkt., 10c.; per oz., 50c.; per lb., \$5.

CAPER TREE (*Capparis spinosa*). Per paper, 15 cts.; per oz., 75 cts.

CATERPILLARS. A curious plant. Of interest only on account of the curious fruits, from which its name is derived. Amusement is caused by mixing them in salads. Per paper, 5 cts.; per oz., 30 cts.

CHICORY—Large-rooted. A perennial, remaining five or six years in the same soil, if cut before flowering. It may be cut four or five times during the same season for green fodder. Sow broadcast in autumn or spring, either alone or with any kind of Clover. Sown in drills, the roots become well developed. When they are dried, roasted and ground they become the Chicory of commerce, and are used in adulterating coffee. Per oz., 10 cts.; per lb., 75 cts.

COTTON—Sea Island. (40 lbs. to bushel.) Per lb., 15 cts.; per 100 lbs., \$7.

Upland. (30 lbs. to bushel.) 25 lbs. to the acre. Per lb., 15 cts.; per 100 lbs., \$7.

COW PEAS (*Vigna Catjang*). Specially adapted to warm countries; extensively grown in our southern states; also valuable in this latitude as a fodder plant, sheep being very fond of them when in flower; their chief value, however, is as a green crop to plow under, as they gather large amounts of nitrogen from the air. They require a deep, rich, sandy soil for best results. The seed should not be sown till the ground has become well warmed. 1 bushel to the acre. Per qt., 15 cts.; per bus., \$2.25.

CYTISUS PROLIFERUS ALBUS (*Tagasaste*). An African fodder plant of merit that has done well in Australia and in California. It is a leguminous shrub, growing well in dry soil and furnishing excellent "browse" for stock. Sow in boxes and transplant when the plants are a few inches high. The seed should be passed through boiling water and then steeped in cold water for 24 hours before sowing. Per oz., 20c.; per lb., \$2.50.

DHOURA—Guinea Corn. See Sorghum.

MISCELLANEOUS SEEDS—continued.

ESPARTO GRASS (*Stipa tenacissima*). This is the true Esparto Grass, extensively grown in Spain and other parts of the Mediterranean countries for making ropes, etc. Per oz., \$1.50.

ESPARSETTE. See *Onobrychis sativa*.

FENUGREEK. Annual. The seed is often sought by hostlers to give a temporary fire and vigor to their horses. It is frequently given to oxen and pigs when fattening, causing them to drink and digest their food. Considered to be good for soiling when green. Per oz., 10 cts.; per lb., 30 cts.

FLAT PEA. See *Lathyrus sylvestris*.

FLAX SEED. 1½ bushels to acre. Price variable.

FURZE (*Ulex Europæa*). Also known as Whin and Gorse. A perennial leguminous shrub, native of northern Europe. The crushed sprigs of one year's growth of this shrub furnish an excellent green fodder in winter. It grows well on dry, barren hillsides and in poor sandy soil, where it makes an excellent forage plant. Sheep are very fond of it. 25 lbs. to the acre. Per oz., 10 cts.; per lb., 75 cts.

GUINEA GRASS. This name is sometimes applied to Johnson Grass, but the real Guinea Grass does not mature seed in the United States.

GUIZOTIA oleifera. An annual from Abyssinia, from the seed of which oil is extracted. Per oz., 10c.; per lb., 75c.

HEMP. One bushel to the acre. Price variable.

HOP SEED. Per pkt., 10 cts.; per oz., \$1.

INDIGO SEED (*Indigofera tinctoria*). Per oz., 20 cts.; per lb., \$1.50.

IRIS pabularia. A forage plant, flourishing in the driest and most arid soil. The seeds should be sown in beds, and the young plants set out 10 inches apart each way, where they are to remain, very early the following spring. Per oz., 75 cts.

JAPAN CLOVER. See *Lezpedeza striata*.

JERUSALEM CORN. See Sorghum.

JUTE. Annual. Thrives in any good corn ground. Sow in drills, about 8 inches apart, 4 pounds to the acre. Requires no cultivation, as it will outstrip in growth all weeds. May be also sown broadcast, 6 to 7 pounds per acre. Per oz., 10 cts.; per lb., 75 cts.

KAFFIR CORN. See Sorghum.

KALE—Jersey Winter, or Cow Cabbage. Said to be hardy from New Jersey southward, where it will stand out all winter, the leaves making valuable winter cattle feed. Sow at same time as winter cabbage. Per oz., 10 cts.; per lb., \$1.

KIDNEY VETCH, or Sand Clover. See Clovers, page 53.

LATHYRUS sylvestris (Flat Pea). A perennial forage plant. The vines when cut dry out readily and make a nutritious hay, which is relished by cattle and horses. It grows well on very poor, unimproved, sandy soil, can withstand pretty severe frosts, and roots so deeply that it is not injured by severe drought. Valuable for plowing under in a green state as a soil renovator to supply nitrogen to poor soils. It is recommended to sow seeds in a small garden bed and transplant to the field when the plants are of suitable size. Per oz., 10 cts.; per lb., \$1.

LENTILS—Best Imported (*Ervum lens*). Succeed best in dry, sandy soil. A leguminous annual, the seeds of which are valuable for pigeons, and are largely used for soups. The leafy stalks make good forage. Per lb., 30c.

LESPEDEZA striata (Japan Clover). A perennial, growing about 12 inches high, valuable only in southern localities, where it thrives in any soil and in the driest seasons; it makes a fair hay, and stock eat it readily when green. It is also very valuable for plowing under as green manure. It is usually sown in the spring, broadcast, at rate of 30 lbs. to the acre. Per lb., 30 cts.; per 100 lbs., \$25.

LIQUORICE (*Glycyrrhiza glabra*). Seed in pods, per oz., 25 cts.

LOTUS corniculatus (Bird's-foot Trefoil). Perennial, used in pastures. Cattle and sheep eat it readily, and it is said to be quite nutritious. It grows on the lightest and most sterile soils, and can withstand severe droughts. It is excellent for sowing in mixtures for dry pastures. Per lb., 60 cts.

LUPINS—Yellow. It succeeds well in the poorest soil, and is exceedingly valuable for plowing in to improve sandy soils. It makes good forage either green or as hay. The seeds are very fattening when used as an addition to hay. It should be sown in the spring when the ground has become warm, at rate of 90 pounds to the acre. Per lb., 20 cts.; per 100 lbs., \$8.

White. One of the best plants known for green manure, as it gathers large quantities of nitrogen from the air. It may be sown from April to July, and plowed under when in flower. The seed, when burned, is excellent manure for orange and olive trees. Per lb., 20 cts.; per 100 lbs., \$8.

Blue. Used for the same purpose as the white variety. Per lb., 20 cts.; per 100 lbs., \$8.

MADDER (*Rubia tinctoria*). A perennial, the roots of which, when dried and reduced to powder, furnish a red coloring matter. If cut the second year when in flower, it furnishes a good green fodder. Per oz., 10c.; per lb., \$1.

MADIA sativa. An annual plant, producing good sheep pasturage; valuable in dry and warm soil. An excellent lubricating oil is extracted from the seeds. Per oz., 10 cts.; per lb., 60 cts.

MILLETS. See Cereals, page 55.

MILLO MAIZE. See Sorghum, Branching.

ONOBRYCHIS sativa (*Sainfoin*, French; *Esparsette*, German). A perennial leguminous plant, belonging to the same family as Clover and Lucerne. It is a valuable plant for growing on barren hillsides. When once well established it lasts for a great many years, yielding heavy hay crops of the highest nutritive value. It is sown in the spring, covering the seeds quite deeply, at rate of 80 lbs. or 100 lbs. to the acre. Per lb., 15 cts.; per 100 lbs., \$9.

SERADELLA. (See page 58.)

OSAGE ORANGE (*Maclura aurantiaca*). Useful for hedges. See Hedge Plants, page 44.

PEARL MILLET (*Penicillaria spicata*). A valuable fodder plant for the south; is enormously productive. Sow the seed in drills 18 inches apart and 8 to 10 pounds to the acre. Per lb., 20 cts.; per 100 lbs., \$9.

ferred to a bed, screened from the hot sun. When the plants are 4 inches high, transplant to a field in rows 4 feet apart each way, and when the plants are 3 feet high, turn them over and peg to the ground, after which cover them with earth, and they will start in every direction. Per oz., \$1; per lb., \$12.

RAPE—Dwarf Essex, English. Largely grown in the northern United States and in Canada. It is excellent for sheep pasture, and also for soiling. It may be sown in May, and will be ready for pasturing in July and August. Or it may be sown in June, or even up to the latter part of July, and yet furnish, under moderately favorable circumstances, a large amount of pasture or fodder. It may even be sown after taking off a crop of early potatoes. In drills, sow 5 pounds to acre; broadcast, 10 pounds to acre. Per lb., 15 cts.; per 100 lbs., \$7.

REANA luxurians (*Teosinte*). A valuable fodder plant from Central America, in growth resembling Indian corn. Well adapted to our southern states. Per oz., 15 cts.; per lb., 80 cts.

RIB GRASS (*Plantago lanceolata*). Per lb., 25 cts.

SAINFOIN. See *Onobrychis*.

SALT BUSH. See Australian Salt Bush.

SACALINE. See *Polygonum Sachalinense*.

SCURVY GRASS (*Cochlearia officinalis*). Used as a pepper grass. Per oz., 25 cts.

SERADELLA. A valuable forage plant, admitting of one, and sometimes two cuttings, in one season. It succeeds well in a dry, sandy soil, and furnishes a good pasture for sheep. It may also be cured for hay. Can be sown with winter rye. About 50 pounds to acre. Per lb., 20 cts.; per 100 lbs., \$9.

SNAILS. Used in the same way as Caterpillars. Per paper, 5 cts.; per oz., 35 cts.

SORGHUM (18 pounds to the acre)—

Early Amber Sugar Cane. Ripens wherever Indian corn matures. Per lb., 15 cts.; per 100 lbs., \$6.

Early Orange Sugar Cane. Ripens about ten days after Early Amber. Per lb., 15 cts.; per 100 lbs., \$6.

Brown Dhoura Corn. Per lb., 15 cts.; per 100 lbs., \$6.

Yellow Branching (*Yellow Millo Maize*). This is non-saccharine; useful only for the large amount of foliage, green feed or cured fodder that it furnishes and for its grain. Per lb., 20 cts.; per 100 lbs., \$7.

White Branching (*White Millo Maize*). The merit of this non-saccharine Sorghum is, that when cut for feeding it starts again from the remaining stumps with renewed strength and vigor; thrives in the hottest and driest localities. Per lb., 20 cts.; per 100 lbs., \$7.

Red Kaffir Corn or Sorghum. Non-saccharine. The plant is low, stalky, perfectly erect. The whole stalk, as well as the blades, cures into excellent fodder, and in all stages it is available for green feed. Per lb., 15 cts.; per 100 lbs., \$6.

White Kaffir Corn. Per lb., 15 cents; per 100 lbs., \$6.

White African Sorghum, African Millet, or White Dhoura. Per lb., 15 cents; per 100 lbs., \$6.

Halepense (*Johnson Grass*). One of the most valuable southern fodder plants. On rich soils it may be cut three or four times in a season. Sow the seed in August and September, at the rate of 25 to 35 pounds to the acre. Per lb., 20 cents; per 100 lbs., \$9.

SPURRY (*Spergula arvensis*). Annual. Grows well on poor, dry, sandy soils. It is in best condition for pasture in four to six weeks after sowing, and may be sown every month from March to August. Excellent pasture for cattle and sheep; also, as a fertilizer for light, sandy soil. 15 pounds to the acre. Per lb., 20 cents; 100 lbs., \$9.

Giant Spurry. Per lb., 20 cents; per 100 lbs., \$9.

SUNFLOWER—Large Russian. Per lb., 10 cts.; per 100 lbs., \$6 (price fluctuates).

PEAS—Canadian Field. Valuable for northern climates, for cattle feeding, being especially valuable for milch cows. It also makes ensilage of fine quality. It is sown broadcast in the spring and harrowed in. Per qt., 15 cts.; per bus., \$1.50.

PYRETHRUM roseum. The plant from which insect powder is made in Europe. Per oz., 75 cts.

POPPY—Opium. The seed furnishes about 35 per cent of an agreeable sweet oil, used for the table, for painting and for illuminating. May be sown in spring either broadcast or in drills, covering with but little earth. Also cultivated for opium. Per oz., 20 cts.; per lb., \$1.

POLYGONUM Sachalinense (*Sacaline*). Hardy perennial, native of the Island of Saghalin, between Japan and Siberia. It has been known to European and American nurserymen for many years, but its merits as a forage plant have only lately been pointed out. It grows well on the poorest soils, and endures the extremes of heat and cold. It grows to a height of 10 or 12 feet, and can be cut two or three times in the season. The stems and leaves, which are very nutritious, are said to be eaten either green or dry by cattle and sheep. Seed, per oz., 60 cts.; per lb., \$6.

RAMIE—Silver China Grass (*Urtica nivea*). Extensively cultivated for its fiber. The seed should be germinated on cotton floating in lukewarm water, and trans-

MISCELLANEOUS SEEDS—continued.

TEASELS—Fullers'. The heads, furnished with barbed spikes, are used for combing 'cloth. Teasels require a good, deep soil, and should be sown about April, or May. The young leaves are often used for feeding silk-worms. Per lb., 30 cts.

TEOSINTE. See *Reana luxurians*.

VELVET BEAN. See under Beans, page 56.

VETCHES—Spring Tares (*Vicia sativa*). Sown broadcast at rate of 1 to 1½ bushels to the acre, like wheat or barley, and sometimes mixed with oats for soiling. Used in France or Canada as a substitute for peas. Also ground up into flour, after which it is mixed with wheat flour for making bread. Per qt., 20 cts.; per bus., \$3.

Sand, Winter, or Hairy Vetch (*Vicia villosa*). This variety thrives on poor, arid, sandy soils. It is sown either in fall or in spring, and generally mixed with rye, which serves as a support to the plants. It grows to a height of from 3 to 4 feet, and can be cut twice for fodder, first as soon as the bloom appears, and then it can be again cut for the seed. The plant is perfectly hardy, and the produce is recommended as most nutritious. The seed is black and perfectly round, and should be sown at the rate of 1½ bushels to the acre. Per qt., 25 cts.; per bus., \$4.50.

Tufted Vetch, or Bird's Tares (*Vicia cracca*). Has creeping perennial roots, and affords provender of good quality. Per lb., 25 cts.

WILD RICE (*Zizania aquatica*). A native of our northern and western states. Valuable as a forage plant for swamps and inundated lands, but it is chiefly valuable as an attraction for water fowl. The Indians of the lake regions of the northwest used to gather it by beating it off into their canoes and then curing it for winter food. Before sowing, put the rice into coarse cotton bags, and sink them in water for 24 hours. Sow in water, which is from 6 inches to 5 feet deep, with soft mud bottom, or on low, marshy places which are covered with water the year round. In running water, sow as much out of the current as possible. Per lb., 25 cts.; per 100 lbs., \$15.

WORMS. Used the same as Snails and Caterpillars. Per pkt., 5 cts.; per oz., 35 cts.

YARROW (*Achillea Millefolium*). On account of its creeping root it is considered a bad weed in pasture and arable lands, yet by many it is thought worthy of cultivation on light soils on account of its nutrient properties. Per lb., \$1.50.

SPRING VETCHES (*Vicia sativa*).

TOBACCO SEEDS.

Brazilian American. The finest Brazilian strain grown here; makes excellent cigars and delightful, aromatic pipe-smoking tobacco. Per oz., 25 cts.; per lb., \$2.

Climax. A cross between Burley and Sterling. Extra fine, bright variety. Per oz., 25 cts.; per lb., \$2.

Connecticut Seed-Leaf. The popular sort, used for cigar wrappers. Per oz., 25 cts.; per lb., \$1.50.

Conqueror. A superb, bright yellow, and a healthy, vigorous grower of the best form and finest texture. It ripens early, and is easily cured to the brightest color. Per oz., 25 cts.; per lb., \$2.50.

Havana. Seed gathered for us from the celebrated plantations of the "Vuelto de Abajo." Per oz., 40 cts.; per lb., \$4.

Honduras. A new mahogany variety, producing the very highest quality of tobacco of this type. A healthy and vigorous grower. Per oz., 25 cts.; per lb., \$2.50.

Kentucky Burley. Per oz., 35 cts.; per lb., \$3.50.

Kentucky Yellow. Per oz., 25 cents; per lb., \$2.50.

Oronoka Yellow. A reliable old yellow variety, grown for more than fifty years and improved with reference to the production of yellow stock. Per oz., 25 cts.; per lb., \$2.

Oronoka, White Stem. From the Yellow Oronoka, which it resembles. Per oz., 25 cts.; per lb., \$2.

Pennsylvania Seed-Leaf. Newest and best strain of this standard and popular variety. Per oz., 25 cts.; per lb., \$2.

Persian Rose. Finer than the Muscatel, and may be relied upon to make the best cigar. Per oz., 25 cts.; per lb., \$2.50.

Pryor, Yellow. Preferred by many for brights, and succeeds where the other yellow sorts fail. The west is giving it preference as a main crop sort. Per oz., 25 cts.; per lb., \$2.

Pryor, Blue. The genuine James River favorite. Per oz., 25 cts.; per lb., \$2.

Safrano. Of a rich, saffron-yellow color, and possessing a soft, silky texture and a delightful flavor. Per oz., 25 cts.; per lb., \$2.

Sterling. The newest and brightest of the yellow type and the earliest to ripen. Per oz., 25 cts.; per lb., \$2.

Sumatra. Expected.

Tuckahoe. Preferable to most of the older varieties for possessing more body. Leaf long and extra fine; the perfection of a wrapper. Per oz., 25 cts.; per lb., \$2.

Virginia Oak Hill Yellow. Resembles White Burley in color and Oronoka in shape and habit. Unsurpassed in delicacy of fiber. Per oz., 25 cts.; per lb., \$2.50.

Virginia "One Sucker." Large leaf; wide, lance-shaped; rather coarse than fine. Per oz., 25 cts.; per lb., \$2.50.

Yellow Mammoth. A new western variety of the export type. Per oz., 25 cts.; per lb., \$2.

Zimmer's Spanish. One of the most popular and extensively grown cigar varieties. Very early; finest quality. Per oz., 25 cts.; per lb., \$2.50.

50 cts each.

LAWN SWEEPER, "MODEL NO. 1."

Designed for use on ordinary lawns, small parks, tennis courts, etc. It is 25 inches wide over all, weighs 28 pounds, and carries a 21-inch brush. The brush is fan-shaped, and revolves very rapidly, in the same direction as the drive wheels, throwing the litter backward from the under surface. Immediately behind the brush, and parallel with it, a thin shoe passes along over the ground, with its upper surface inclined.

The operation involves the principle of "Dust-pan and Broom." In addition to this, the fan-shaped brush creates a strong current of air, that blows the litter back into the rear of the hopper. If sticks or stones are encountered, the shoe does not allow them to pass under it, but provides a passage over it into the hopper. **Price, \$10.**

LAWN SWEEPER, "MODEL NO. 1."

THE "PLANET JR." SEED DRILLS, ETC.

No. 4. Combined Hill and Drill Seeder. Single Wheel Hoe, Cultivator, Rake and Plow. Price, complete, \$12. As a Drill only, \$8.50.

The Thorburn Ball-Bearing Lawn Mower.

**BALL BEARINGS.
TRIPLE GEAR.
EASIEST WORKING.
FINEST FINISHED.
LONGEST LASTING.**

The Thorburn Ball-Bearing, made expressly for us, is in every respect **THE BEST LAWN MOWER EVER MADE.**

THE FOLLOWING ARE ITS SPECIAL FEATURES:

Ball Bearings, exact to $\frac{1}{1000}$ of an inch, which reduces the friction astonishingly, making it possible to use wider-cut machines. With this mower a lawn can be mown in a much shorter time, and with much greater ease, than with any other Mower made. **Triple Gears**, entirely closed, making it impossible for any dirt or cut grass to get into the pinions and clog them. **A Solid Rectangular Frame**, that cannot be twisted or jarred out of parallel, the two side frames being bound tightly together by means of two cold die-drawn steel bolts, which make the most rigid frame ever built, and permit of the mower being readily taken apart. **A Removable Cutter Bar**, which, by loosening four small screws, may be rolled out of the machine for sharpening, without disturbing the frame. **Micrometer Adjustment for Cones and Ball Cups**—The slight wear of the cones, balls and cases, consequent upon long continued use, is perfectly compensated for by *two* screws (other machines have six, and some ten to accomplish this in parallel bearings). **Double Steel Ratchet**, making the knives cut the instant you move the Mower, a delightful contrast from the old-style Mowers. **Cold Die-drawn Steel Axles**, hard and stiff, and true to within $\frac{1}{1000}$ of an inch, which, with the cast-iron hub of the wheels, bored and reamed to a perfect fit, make an ideal bearing—much superior to cast-iron axles in cast-iron hubs. **Material**—Knives of first-class high-grade steel, hardened and tempered. Spiders (to which the revolving knives are riveted) and roller brackets of very best malleable iron. Side frames and wheels of best gray iron. Shafts of cold die-drawn steel.

What Recognized Authorities say about THE THORBURN BALL-BEARING MOWER.

It should be noted that the subjoined letters are from those who give hard and constant use to the Lawn Mower, and who must have satisfactory work from the machines.

STAATSBURG, N. Y., Oct. 31, 1899.
MESSRS. J. M. THORBURN & CO.

Gentlemen: The Ball-Bearing Mowers purchased from you last spring have given better satisfaction than any mower I ever used. They run easier, make a smoother cut and are less liable to get out of order. They have been in use daily since May, and are as good at this writing as when purchased. You can book my order for other two, to be delivered next May.

Yours respectfully,
(Signed) THOS. EMERSON,
Gardener, estate of W. B. Dinsmore.

OPHIR FARM, WHITE PLAINS, N. Y., Oct. 30, 1899.
MESSRS. J. M. THORBURN & CO.

Gentlemen: We last spring purchased from you two of the Thorburn New Ball-Bearing Lawn Mowers, which

we have used with great satisfaction continuously the past season. Slopes which heretofore we have had to cut with the scythe we have this season cut with ease with this new mower, so easy is its action. Our lawns never looked better. The cut was clean—not a sign of ridging—and less manual labor to accomplish these results.

Yours very truly,
(Signed) JOSEPH DEXTER,
Supt. for Hon. Whitelaw Reid.

MILLBROOK, N. Y., Oct. 27, 1899.
MESSRS. J. M. THORBURN & CO.

Gentlemen: Your Thorburn Ball-Bearing Lawn Mower has done excellent work. I have found it entirely as represented.

Very truly yours,
(Signed) I. L. POWELL,
Supt. for Samuel Thorne, Esq.

THE THORBURN BALL-BEARING LAWN MOWER—Testimonials, continued.

MILLBROOK, N. Y., Nov. 24, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: The Thorburn New Ball-Bearing Mower has given entire satisfaction. I used it for three months steady every working day, and it was never out of order, and cut more grass with less power than any machine I ever used.

Yours truly,

(Signed) W. C. RUSSELL,
Supt. for C. F. Dieterich, Esq.

SHADOW BROOK FARM, LENOX, MASS., Nov. 22, 1899.
MESSRS. J. M. THORBURN & CO.

Gentlemen: I take pleasure in acknowledging that the 22-inch Thorburn New Ball-Bearing Lawn Mower which I bought from you last spring has pleased me very much, being more easily worked than any other of same cutting capacity that I know of. Having been in almost daily use from spring to late in fall, it has held out excellently and is in perfect shape for another year's hard trial.

Yours very truly,

(Signed) ERNST A. LUNDBERG,
Supt. for Anson Phelps Stokes, Esq.

NEWPORT, R. I., Oct. 30, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: I have pleasure in stating that after seven months' trial, I am entirely satisfied with your New Ball-Bearing Mower. It runs easily and does better work, and it costs nothing during the season for repairs. I have used Excelsior, Philadelphia, New Model—all were good in their day. But give me Thorburn's Ball-Bearing now.

Yours very truly,

(Signed) ROBERT MCLEOD,
Gardener to D. B. Fearing, Esq.

BELVOIR TERRACE, LENOX, MASS., Oct. 27, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: I have used your Ball-Bearing Hand Lawn Mower the past summer and find it equal, if not superior, both for long (that is, not over 4 inches) and short grass to any machine I have ever used.

Yours respectfully,

(Signed) P. J. DONOHUE,
Supt. for Moris K. Jesup, Esq.

ERSKINE PARK, LENOX, MASS., Nov. 1, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: Your Ball-Bearing machine was in constant use here last summer and gave entire satisfaction. I consider it the best machine we ever had.

Yours very truly,

(Signed) E. J. NORMAN,
Supt. for Mrs. Westinghouse.

ALLEN WINDER FARM, LENOX, MASS., Oct. 31, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: The Ball-Bearing machine I purchased last spring of you has given every satisfaction. It cuts beautifully and runs very easy.

Yours very truly,

(Signed) A. H. WINGETT,
Supt. for Geo. E. Turnure, Esq.

GREENWICH, CONN., Oct. 28, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: Your Ball-Bearing Lawn Mower has given splendid satisfaction this season. It has been used two days every week during the entire season, and is today in perfect running order, though it has never had any repairs. It is in every way a perfect machine and without doubt the lawn mower of the future.

Yours very truly,

(Signed) JOHN W. DUNCAN,
Gardener to W. H. S. Wood, Esq.

HARRISON, N. Y., Oct. 30, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: The New Ball-Bearing Mower purchased of you last spring gave me good satisfaction. It is now at this date in good order for another season. I have

used it on an average of three days a week, from May almost to the present time, without the slightest repair. I can highly recommend it.

Yours truly,

(Signed) JOHN SHORE,
Gardener to W. H. Macy, Esq.

"GRAYSTONE," IRVINGTON-ON-HUDSON, N. Y.,
October 31, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: Your New Ball-Bearing Mower has been fully tested and has given the utmost satisfaction. For five months it has been used every working day, for about ten hours daily, keeping over 15 acres of lawn in the best shape. The greater part of this consists of sidehill terraces that are hard on a machine. Yet it has required no repairs up to date. The adjustment is so perfect that the man using it had no trouble in keeping it right. It is the easiest and lightest running machine, doing its work in the best manner, that I have had experience with so far.

Yours truly,

(Signed) THOS. COCKBURN,
Gardener to Louis Stern, Esq.

WEST CHESTER, N. Y., Nov. 8, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: It affords me the greatest pleasure to write and tell you how well I have been pleased with the Thorburn New Ball-Bearing Mower. In my opinion there is nothing to equal it in its line. In my experience of eighteen years at gardening it is away the best machine I ever handled. It runs light and does the work thoroughly, and has not once got out of order. It has been used on an average three days a week all summer. In concluding, I will say that in the future the Thorburn Ball-Bearing Mower is the one for me. I remain, gentlemen,

Yours truly,

(Signed) JOHN U. PENNEY,
Gardener to A. H. Morris, Esq.

RIVERDALE-ON-HUDSON, N. Y., Oct. 31, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: My opinion of your Thorburn New Ball-Bearing Lawn Mower is very good, and I am well pleased with it. It deserves the highest praise—for your lawn mower is the joy of the mower's heart—for its lightness in draft.

Yours truly,

(Signed) CHAS. COYNE,
Gardener to G. P. Morosini, Esq.

DELFOED FARM AND GARDENS, ORADELL, N. J.,
October 31, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: Allow me to compliment you upon the excellent qualities of the Thorburn Ball-Bearing Lawn Mower. It proves to be just what I have been wishing for, a light, durable, clean-cutting machine. I think you should be conceded the honor of having produced the right article at last.

Yours truly,

(Signed) JOHN HEISER,
Supt. for Hon. Hugh J. Grant.

MAMARONECK, N. Y., Nov. 8, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: Your New Ball-Bearing Mower has given me entire satisfaction. It is very easy running, and I can do more work with it than with any other I have used.

Yours truly,

(Signed) A. ALIUS,
Gardener to W. G. Reade, Esq.

GLEN COVE, L. I., N. Y., Oct. 26, 1899.

MESSRS. J. M. THORBURN & CO.

Gentlemen: The 20-inch Thorburn New Ball-Bearing Mower which I bought of you last spring I find O. K. in every respect.

Yours truly,

(Signed) WM. A. TROUB,
Gardener to Percy Chubb, Esq.

Coldwell Improved Horse Lawn Mower.

This well-known standard Mower has side-draft attachment, to enable the horse to walk on the cut grass only, and caster rollers, which will not mark the lawn. Evenness of cut is assured by an adjustment which raises or lowers the two sides at the same time by means of a simple lever movement; the same lever serves the purpose of raising the knives from the ground when driving over gravel walks or roads. The Mowers are fitted up with steel shafting and composition split bushings, and great care is taken to have the workmanship perfect. Each Mower is guaranteed to give entire satisfaction to the purchaser.

The Imperial High Wheel Lawn Mower.

Combines the following points of excellence: The rigid frame; the positive lock adjustment; the arrangement for sharpening; the arrangement for mowing terraces; the six driving pawls, that will never wear out; the bottom knife, that will cut tenpenny nails in two; the gears, that will outwear the gears of any two lawn mowers on the market, as they do not turn when the machine is drawn backward; the unexcelled device for taking up all wear in the wiper journal; the general workmanship and finish of this Mower, which is equal to that of any lathe or other machine designed for good work and long life.

NET PRICES:

Chain Roller, or Golf Mower.

This Mower is made to meet the demand for a machine that will more perfectly cut borders, verges, etc., and yet retain all the other features necessary in a mower for general work. The great advantage of this Mower is the substitution of a bicycle chain for the gears generally used in this style of mower. This reduces the noise and friction to a minimum. The machine with 6 blades is highly recommended by most of the leading golf clubs in America for work on putting-greens.

The best for
Putting-Greens.

THE "SUCCESS" KNAPSACK SPRAYER.

A knapsack and bucket sprayer combined. 5-gallon copper tank. Brass pump with bronze ball valves. For spraying plants with Bordeaux mixture or other fungicides. The new improvements recently made to our Success Knapsack Sprayer entirely obviate all objections to the knapsack pattern. As now made this sprayer can be used either as a knapsack or bucket sprayer, the illustration as here given showing its use as a knapsack. To be used as a bucket sprayer, the handle and lever are removed, and the extra handle with which the outfit is provided is placed in position as shown by the dotted lines. It will be noticed that the straps used on this knapsack are made extra wide just where the weight comes upon the shoulders. This is a feature possessed by no other knapsack sprayer, and relieves the unpleasantness formerly experienced in the use of outfits of this character. It is provided with a mechanical agitator. It is also provided with a handle at the center of the top of the tank. This greatly increases the convenience of the outfit, especially when used as a bucket sprayer, as it can be readily carried from place to place. The pump may be worked with either the right or left hand, and may be readily removed from the tank by unscrewing the drip cup. The drip-cup is just below the air chamber, and is made extra wide, so that any leakage around the plunger is returned into the tank, and not allowed to run down the operator's back, as is so often the case with knapsack sprayers. We also furnish a special attachment, shown at A, for under-spraying. A wrench is provided for detaching pump from tank. Price, complete, as shown in cut, \$12.

THE "SUCCESS" KNAPSACK SPRAYER.

THE "LENOX" SPRAYER.

THE "LENOX" SPRAYER.

Made of galvanized iron, that will not rust. Holds 6 gallons of liquid. The spray is forced out by simply pressing the rubber bulb. A first-class sprayer for applying such insecticides as Paris green to grape vines, shrubs and vegetables, but the spray is not fine enough for Bordeaux mixture. Price, with single sprinkling attachment as shown in cut, \$3.50.

MYERS' BUCKET BRASS SPRAY PUMP.

MYERS' BUCKET BRASS SPRAY PUMP.

Being made of brass, it is not affected by the arsenites used for spraying. Easily operated; throws a solid stream 50 feet. It is provided with a combination nozzle, and also with a sprinkler for flowers. For spraying large trees, an 8-foot pipe extension is supplied for 60 cents extra. This pump is also valuable for washing windows. \$4.

LEGGETT'S CHAMPION POWDER GUN.

LEGGETT'S CHAMPION POWDER GUN.

For distributing dry insecticides and fungicides, such as Paris green, hellebore, sulphur, tobacco dust, fungioid. It is well made, and weighs only 5 pounds. The style of it is shown by our illustration. Without the tubes it is 27 inches long, but when the four tubes are attached it is 10 feet long, and it throws the powder several feet beyond that. It holds one quart of powder, and is easily operated. An invaluable machine for use in orchard, garden or field. The length of it is such that the poison is kept at a safe distance from the operator. The regular outfit consists of six nozzles, two straps, oil can and four tubes. Price, complete, \$7.50.

WOODASON'S DOUBLE-CONE POWDER BELLOWS.

An excellent Bellows for applying powder insecticides in greenhouse, garden or field. The powder can easily be evenly distributed in any direction, under or over the foliage, without waste. Price, \$3.

WOODASON'S BELLOWS.

WOODASON'S SINGLE-CONE POWDER BELLOWS.

The style of these is shown by our cut. They come in two sizes, the smaller one being most suitable for use in the conservatory. Price, large size, \$2; small size, \$1.

WOODASON'S ATOMIZER.

An excellent article for applying strong liquid insecticides, as it throws it out in a spray as fine as mist, and distributes it lightly, evenly, and without any waste. The small size is recommended for use in the house. Price, large size, \$2; small size, \$1.25.

Insecticides and Remedies for Plant Diseases.

COPPERDINE.

A combined fungicide and insecticide, used simply by adding water in proportion of 1 pound of the paste to 16 gallons of water. As a fungicide it prevents black rot, downy mildew and anthracnose of the grape, pear leaf-blight, apple scab, mildew, apple rot, black spot, strawberry blight. As an insecticide it kills codlin moths, curculio, pear insects, peach and apple borers, currant worms, cabbage worms, potato bugs and caterpillars. 1-lb. box, 25 cts., makes 16 gallons spray. 5-lb. box, \$1, makes 80 gallons spray.

FIR-TREE OIL.

For greenhouse and house plants. It destroys all plant insects without injuring the plant. It is the best insecticide for scale, aphids, red spider, mealy bug, thrip and worms. Dilute in the proportion of 1 pint to 20 gallons of water. Apply with vaporizer or syringe. $\frac{1}{2}$ pt. 40 cts.; pt., 75 cts.; qt., \$1.25; $\frac{1}{2}$ gal., \$2.25; gal., \$4.

FIR-TREE OIL SOAP.

This is the same as the Fir-Tree Oil, but in soap form. It is useful for the same purposes. Mix at rate of 1 ounce to a gallon of water, and apply with bellows or syringe. $\frac{1}{2}$ -lb. tin, 25 cts.; 2-lb. tin, 75 cts.; 5-lb. tin, \$1.75.

DALMATIAN INSECT POWDER.

Effective against almost all kinds of insects. Per $\frac{1}{2}$ -lb. box, 30 cts.; per 1-lb. box, 50 cts.

GISHURST'S COMPOUND.

A certain remedy for greenfly, scale, mealy bug, etc. Excellent for greenhouse use. Full directions for use on each box. Per 1-lb. box, 50 cts.

HAMMOND'S GRAPE DUST.

For the prevention of mildew on roses, grapes, gooseberries, etc. Apply with bellows. 5-lb. package, 35 cts.; 10-lb. package, 60 cts.; 100-lb. keg, \$5.

HELLEBORE, POWDERED.

An excellent protection from currant worms, grape slugs, caterpillars, etc. May be applied dry or mixed in water—1 oz. to 3 gallons. Per 2-lb. box, 35 cts.; per 1-lb. box, 20 cts.; $\frac{1}{2}$ -lb. box, 12 cts.

NIKOTEEN.

A powerful insecticide, specially prepared for use in greenhouses and conservatories. Per pint bottle, \$1.50.

PARAGRENE.

Said to be as effective as Paris green for killing every kind of insect, but does not scorch or burn the foliage. 3-lb. package, 40 cts.; 1-lb., 15 cts.; $\frac{1}{2}$ -lb., 10 cts.

PARIS GREEN.

Mixed at the rate of 1 lb. to 200 gallons of water, it will prove effective against all chewing insects. Per 1-lb. can, 35 cts.; $\frac{1}{2}$ -lb. can, 20 cts.; $\frac{1}{4}$ -lb. can, 15 cts. This article is liable to fluctuate in price.

LITTLE'S ANTIPEST.

A sure destroyer of all insect pests. It is non-poisonous and harmless to vegetation. Mixed with water as follows it is effectual against—greenfly, 1 pt. to 10 gals. of water; mealy bug, 1 pt. to 1 $\frac{1}{2}$ gals.; red spider, 1 pt. to 2 gals.; ants, wireworms and slugs, 1 pt. to 1 gal. $\frac{1}{2}$ -gal. can, \$1.50; gal. can, \$2.50.

SLUG SHOT (HAMMOND'S).

Excellent for destroying cabbage, turnip and beet fly, potato bugs, currant worms, etc. Prepared ready for use. 5-lb. package, 30 cts.; 10-lb. package, 50 cts.; 100 lbs., \$4.

SULPHUR, POWDERED.

Valuable for protecting against mildew on grapes, roses, etc. Per lb., 10 cts.; 10 lbs., 60 cts.; 100 lbs., \$4.

SULPHO-TOBACCO SOAP.

Dissolve in proportion of 2 ounces to a gallon of water, and apply with a syringe or atomizer. It will destroy rose slugs, aphides, greenfly, bark-lice, etc. Per $\frac{1}{2}$ -lb. box, 25 cts.

TOBACCO DUST.

If dusted on *while the foliage is moist* it destroys rose lice, cabbage and turnip fleas, etc. Spread upon the ground, it keeps off all earth insects, and also acts as an excellent fertilizer. Per 1-lb. box, 10 cts.; 5-lb. package, 30 cts.; 10-lb. package, 50c.; per 100 lbs., \$2.50.

TOBACCO STEMS.

For fumigating plants infested with greenfly. Per bale of about 100 lbs., \$1.50; per bale of about 200 lbs., \$2.75; per bale of about 400 lbs., \$4.50.

"ROSE LEAF" TOBACCO EXTRACT.

A perfectly pure, highly concentrated extract of tobacco, most effective for destroying all insects and scale on plants. Our "Rose Leaf" pamphlet gives full directions for applying. Pint can, 30c.; qt., 50c.; gal., \$1.25.

WHALE-OIL SOAP.

For washing trees and destroying all insects on the bark. Mixed at the rate of 1 lb. to 4 gallons of water, it will rid cabbage, rose bushes, peach trees, etc., of the aphides that so often infest them. Per 1-lb. box, 18 cts.; 5 lbs., 50 cts.; 10 lbs., 90 cts.; 100-lb. keg, \$7.

BORDEAUX MIXTURE, or FUNGIROID.

For all fungous diseases, such as mildew and the various rots of the grape. Full directions on label. Dry, 1-lb. box, 20 cts.; 5 lbs. and over at 15 cts. per lb.; 50-lb. keg, \$6; liquid, 1 gallon, \$1.25.

"Jadoo" Fibre and "Jadoo" Liquid.

JADOO FIBRE is a new growing substance for plants of all kinds. It was invented by Col. Thompson, of the Royal Army and Fellow of the Royal Horticultural Society of England, and it is highly recommended by gardening authorities there. It suits all kinds of plants, is only half as heavy as earth, and cleaner to handle; requires no soil to mix with it, and no manure. It increases the size and the brilliancy of flowers. Seeds germinate, and cuttings root in it, quicker than in earth. Owing to its spongy nature, it retains water much longer than earth. Plants transplanted in Jadoo Fibre do not flag, even if in full bloom.

JADOO LIQUID revives drooping plants and increases the size and profusion of bloom. It is both meat and drink to plants of all kinds. It can be used on plants that are grown in earth or in Jadoo Fibre.

Price of the Jadoo Fibre. 4-lb. box, 25 cts.; 25-lb. bag, \$1; per bag of 120 to 130 lbs., \$2.50; per ton, \$30.

Price of the Jadoo Liquid. Pint bottle, 25 cts.; 2-gallon can, \$1.50; 5-gallon can, \$3.75.

HIGH GRADE FERTILIZERS.

(NET CASH.)

These Fertilizers are specially manufactured for us, and are reliable and efficient for the purposes specified. Bone basis guaranteed. Great care should be taken that all Fertilizers are well incorporated with the soil, so as not to come in contact with and destroy the vitality of the seed sown.

Quantity required on soils not impoverished, about one-half ton per acre.

THORBURN'S COMPLETE MANURE

Guaranteed to contain ammonia, 3 to 3½ per cent; phosphoric acid, all soluble, 8 to 10 per cent; sulphate of potash, 7 to 7½ per cent; sulphate of magnesia, soda, lime, sulphuric acid, etc. Adapted for use on all crops, such as corn, tomatoes, potatoes, peas, beans and early vegetables, and is especially suited for grain crops and for seeding down grass.

Price—In 167-lb. bags, per ton, \$38; single bags of 167 lbs., \$3.50; per bag of 100 lbs., \$2.25; 50 lbs., \$1.50; 25 lbs., \$1; 10 lbs., 50 cents.

THORBURN'S POTATO MANURE.

Guaranteed to contain ammonia, 4½ to 5 per cent; phosphoric acid, all soluble, 7 to 9 per cent; actual potash, 9 to 10 per cent; sulphate of magnesia, soda, lime, sulphuric acid, etc. This manure is for special use on the potato crop, and is also adapted for sweet potatoes, vines, and fruit trees, and all leguminous plants.

Price—In 167-lb. bags, per ton, \$45; single bags of 167 lbs., \$4; per bag of 100 lbs., \$3; 50 lbs., \$1.75; 25 lbs., \$1; 10 lbs., 50 cents.

THORBURN'S LAWN FERTILIZER.

Guaranteed to contain ammonia, 5 to 6 per cent; phosphoric acid, all soluble, 5½ to 7 per cent; actual potash, 7½ to 8½ per cent; lime, sulphate of magnesia, soda, sulphuric acid, etc. Specially prepared for lawns and meadows as a top-dressing, imparting to grass a rich green color and vigorous growth.

Price—In 167-lb. bags, per ton, \$48; single bags of 167 lbs., \$4.50; per bag of 100 lbs., \$3; 50 lbs., \$1.75; 25 lbs., \$1; 10 lbs., 50 cents.

CLAY'S CELEBRATED FERTILIZER.

On account of the high reputation which this Fertilizer has in England, and as we have had many inquiries for it by gardeners here, we have imported some from Messrs. Clay & Son, which we offer at the following prices. It is undoubtedly one of the best manures for all horticultural purposes, either in greenhouse or garden, and we believe its high reputation is well-deserved. It is productive and lasting, and notwithstanding its apparently high price, it is quite economical.

PRICES IN BAGS.

1 cwt. (112 lbs.)	\$7 00	¼ cwt. (28 lbs.).....	\$2 25
½ " (56 lbs.).....	4 00	⅛ " (14 lbs.).....	1 25

PULVERIZED SHEEP MANURE.

A very rich, pure natural manure. It is excellent as a top-dressing for lawns. Its effect is immediate and very lasting. There is nothing better for mixing with the soil for greenhouse plants—one part manure and six parts soil. It is recommended for use in the vegetable garden, promoting a rapid and steady growth. It makes a rich and safe liquid manure—1 pound to 5 gallons of water.

5-lb. package, 30 cts.; 10 lb., 50 cts.; 50 lbs., \$1.25; 100 lbs., \$2; ton, \$30.

BONE FERTILIZERS.

Pure Ground Bone Meal. This finely pulverized ground bone is excellent for rose culture. It decomposes very rapidly, and is more quickly effective than the coarser grade. It is excellent for mixing with the soil for potting. 5 lbs., 25 cts.; 50 lbs., \$1.25; 100 lbs., \$2; per ton, \$32.

Ground Bone No. 3. This is coarser than the above, and is suitable for general purposes, for top-dressing for lawns, and for garden and field crops. Per 100-lb. bag, \$2.25; per ton, \$38.

Ground Bone No. 4. A little coarser than No. 3. Per 100 lbs., \$2.50; per ton, \$40.

Crushed or Coarse Bone. Being much coarser, this takes effect more slowly, but is correspondingly more permanent. For orchards, small fruits, grape vines, etc., which require a lasting fertilizer, there is nothing better. Per 100-lb. bag, \$2.75; per ton, \$43.

BOWKER'S FOOD FOR FLOWERS.

A dressing made expressly for plants grown in the house, garden or conservatory; clean, odorless, and producing early and abundant blossoms, and healthy, luxuriant plants. One small package is enough for thirty plants for three months. Decidedly the best dressing for potted plants.

Small packages, 15 cts. each; large packages, 25 cts.

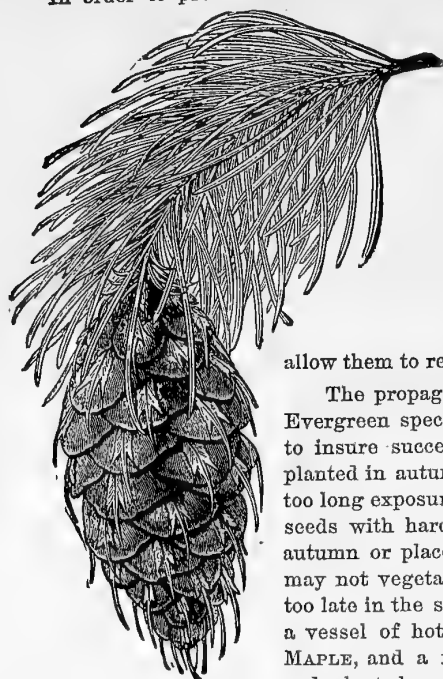

OTHER FERTILIZERS.

Blood and Bone Fertilizer.....per 100-lb. bag, \$2.25; per 200-lb. bag, \$4; per ton, \$34.
Nitrate of Soda. For stimulating growth of plants. .5-lb. pkg., 30c.; 10-lb. pkg., 50c.; 50-lb. bag, \$2; 100 lbs., \$3.75.
Unleached Wood Ashes...per bag of 100 lbs., \$1.50; per barrel of about 200 lbs. to 300 lbs., \$1.25 per 100 lbs.; per ton, \$20.

TREE AND SHRUB SEEDS.

HOW TO GROW THEM.

In order to preserve seeds of CONIFERS and other EVERGREEN TREES, it is best to keep them in perfectly

PICEA DOUGLASII.

dry sand until the time of sowing. For this latitude, the seeds should be sown thinly, as early in the spring as the ground can be worked, in beds of fine, sandy loam. Cover to the depth of about the thickness of the seed, and press the beds gently with the back of the spade to firm the earth around the seeds. Great care must be taken not to give too much water, as the young plants damp off very easily. Water with a very fine rose, but never so that the ground becomes soggy. Some shade must be used to protect the young plants from the hot, drying sun and winds, and also to keep the birds from destroying them. Seeds of the rarer sorts may be sown in coldframes or boxes; if in coldframes, the sashes should be shaded and the frames raised at the corners 3 to 4 inches, to allow the air to circulate freely. Keep the young plants well weeded, and

allow them to remain from one to two years before transplanting.

The propagation of DECIDUOUS TREES from seeds is less difficult than that of Evergreen species, a little attention only being required to sow at the proper season to insure success. ACORNS, HICKORY NUTS, CHESTNUTS and WALNUTS should be planted in autumn, or kept during the winter in sand or moss. They shrivel up by too long exposure to the air, and many of them lose their power of vegetating. Those seeds with hard shells, like the LOCUST, GYMNOCLADUS, etc., should be planted in autumn or placed in boxes with sand, and exposed to frost before planting. They may not vegetate till the second year after planting, but if these seeds are received too late in the spring to expose them to the action of the frost, they may be put into a vessel of hot water for an hour or so before planting. AMERICAN ELM, SILVER MAPLE, and a few other sorts ripen their seeds early in summer, and if gathered and planted soon after they fall from the tree, will make fine plants the same season. The seeds of other DECIDUOUS TREES AND SHRUBS should be planted from

the middle of April to the middle of May, in drills about 2 feet apart, and covered about half an inch in depth, according to size.

The varieties here offered are on hand now, or are due from foreign countries, having been collected for us of the 1899 crop. As the season advances many sorts become worthless from various causes, or are sold out, and cannot be replaced until the new crop is ready next season.

EVERGREEN TREE SEEDS.

 We do not sell Tree or Shrub Seeds in quantities of less than an ounce of any one variety, except those quoted at over 25 cents per ounce; of these, 25-cent packets may be ordered.

CENTAUREA ODORATA.

FLOWER SEEDS.

Practical Directions for Culture, Treatment, Etc.

HARDY ANNUALS (ha).—Sow in April or May, according to the latitude, in shallow boxes or pots placed in a warm window, a hotbed, or, if possible, in a greenhouse. A second sowing ought to be made from two to four weeks after, for a succession, as well as to provide against failure the first time. For sowing seeds in, there is nothing better than shallow boxes from 2 to 3 inches deep and of any convenient size. The most suitable soil in which to sow seeds of all the smaller kinds is a very fine, rich, sandy loam; if some fine charcoal can be mixed with it, it will be beneficial. The soil from old hotbeds is excellent, or sods from an old pasture, piled up and allowed to rot for two or three years, and then mixed with a little old stable-manure and sand. The selection of a proper soil in which to sow fine seeds is very important, as upon this depends the success or failure of them. After the seeds are up, care must be taken to give them plenty of

air and moisture, and yet not too much water, or they will "damp-off." When the young plants are well out of the seedleaf, they must be transplanted to new boxes. If pots 2 inches or more in diameter can be had, set out from three to a dozen or more of the young seedlings along the edges of the pot, so that as soon as the ground is warm enough they may be easily turned out and planted singly, as by that time they will have made good roots. When the pots cannot be had, boxes, tin cans, etc., may be substituted; or a cheap and effective plan is to take out the inside of a potato or turnip, leaving a shell half an inch thick. After filling these with the compost above referred to, set out the seedlings in them, and place the whole in boxes, filling in the spaces between the potatoes or turnips with soil. When the plants are ready to set in the open ground, it is an easy matter to transplant them, and as the decay of the turnips or potatoes affords nourishment to the young plants, a double purpose is served in using them. Treated in this way, the seedlings receive no check in growth, and require none of the extra care in watering or shading necessary with other methods.

A common mistake in sowing flower, as well as other seeds, is covering too deep. As a general rule, cover only to the depth of the thickness of the seeds, or with medium-sized seeds, like Balsams, Zinnias, etc., half an inch or so is none too much. Such fine seeds as Portulacas need only to be pressed into the soil with a piece of board or the palm of the hand. Always press the earth down firmly after sowing all flower seeds, else there is danger of their drying up before the roots can get firm hold of the soil. Seeds of the hardier Annuals may be sown where they are to grow; but as a rule it is preferable to transplant, as the plants are generally stronger and stand the drought better. During very dry weather, and when the seedlings are first set out, they should be watered frequently. Provide some support for all such Annuals as require it, else the plants become weak and straggling, and do not make the show they otherwise would.

The weeds should be kept down and the ground loosened often, so that the plants will receive the full benefit of the rains and dews, which they will not if the ground is allowed to become hard and baked.

Seeds of Biennials and some Hardy Annuals may be sown in September in boxes, and placed in coldframes. They will make strong plants by spring, and come into flower early. Do not put on the sashes until heavy rains and frosts render this necessary, and then always remove during the day, and whenever the temperature is above freezing in winter.

HARDY BIENNIALS (hB) and PERENNIALS (hP).—These require the same treatment as the Hardy Annuals. In addition to the above, both Hardy Biennials and Perennials may be sown in the open border in September; for if not sown until spring, the seeds of many Perennials require two years before they germinate. In this case it is a good plan, at the commencement of frost, to cover them lightly with straw, leaves or any dry litter, in order to afford some protection from the extreme severity of the winter. As soon as the frost is out in the spring, remove the covering and loosen the surface around the plants, which, when large enough, may then be transplanted to the flower garden where they are to remain.

HALF-HARDY ANNUALS (hhA).—These may be sown in shallow boxes, pots, or a hotbed, as directed for Hardy Annuals. They may be sown thus at any time after the middle of April, as the hotbed will be sufficient protection; but it is best to cover the glass with a mat or straw at night until danger of frost is past. In the day give all the air possible by partially or wholly removing the lights. After the end of May sow in the border, like Hardy Annuals.

HALF-HARDY BIENNIALS (hhB) and HALF-HARDY PERENNIALS (hhP) require the same treatment. Though plants and their bloom are greatly forwarded by sowing the seeds early in boxes under cover, it may be stated that nearly all kinds of hardy and half-hardy flower seeds may be sown in the open border in a warm and sunny spot, as soon as the soil has become dry and warm; so that those who have no glass frames or greenhouses need not be without flowers. They can have them, but it will be later.

TENDER ANNUALS, BIENNIALS and PERENNIALS.—The best method to obtain an early bloom of the Tender Annuals (tA), and to insure strength to the plants, is to sow the seeds in boxes or pots in March, placing them in a warm greenhouse, or plunging in a moderate hotbed, carefully protecting them from the cold, shading from the midday sun, and watering with a fine rose. The seed should be sown in very light, sandy compost, and the pots well drained by placing broken pots or bits of sods in the bottom. The finer seeds must not be covered more than an *eighth of an inch deep*, and the soil pressed down closely over them. Water frequently, particularly if the house or hotbed is very warm. As soon as the plants are out of the seed-leaf, transplant into shallow boxes or small pots, and when they have acquired sufficient strength transplant into the flower beds; not, however, before the middle of May.

GREENHOUSE SEEDS (g) should be sown as directed for Tender Annuals, in pans, pots or shallow boxes, and be kept in the house, carefully watched, slightly watered occasionally, and sheltered from the hot sun till strong enough to transplant. Most varieties may be sown at any season of the year.

The smaller seeds of Greenhouse Plants are sometimes difficult to germinate, unless great care be taken in the mode of sowing. Hence the supposition is produced that the seed itself is not good, whereas the fault is not in the seed, but in the treatment. Fine seeds of this description should be sown in leaf-mould or peat, with some fine sand added to it; press firmly down in the seed-pan or pot, and make perfectly level at the top, so that the mould may not afterward sink materially with watering. Sow the seed very thin, and cover *very lightly* with a little compost, or with silver sand. Success is more certain if a pane of glass is placed over the pan or box till the plants have appeared, when it should be removed. By this method the difficulty of starting fine seeds will be removed. As soon as the young plants have two leaves, they should be transplanted into similar compost in another pan or box. To do this, do not pull them out of the seed pan, but break up the soil by running a stick or trowel under it, when the plants can be taken out with good roots. After transplanting they should be kept in a shady part of the greenhouse for a few days, and watered very sparingly, until they are somewhat established in the new soil, when they may be removed to the light.

There are many minute plants from the finer seeds killed by drenching with water while very young. One way to avoid this is to give the water by dipping a clothes-brush in water, shaking off the greater part of the water from the brush, and then (holding the brush over the seed-pan) drawing the hand over the bristles several times, which will cause the water to be thrown on the young plants almost like dew. Some of the vaporizers and atomizers (as used for perfumes) now in use are admirably adapted for watering tender young plants. In the first stage of their existence, plants require moisture in a minute quantity, often repeated, and not in such large quantities as to saturate the soil in which they are growing.

Primula Sinensis.—The Chinese Primrose is deservedly one of our most popular winter-blooming plants. For winter use it is easily grown from good seed, if sown at the right time and properly treated. Sow the seed in drills, in a light, rich soil, in shallow boxes, at any time from the middle of March to the middle of May; the earliest sown seed will naturally produce the earliest bloom. Cover the seeds about an eighth of an inch, and press the soil on them with a board or the bottom of a pot. Water moderately, avoid forcing the seed, and keep the young plants away from drip. The boxes may be placed in the greenhouse, or out of doors in a frame. As soon as the plants are well out of the seed-leaf, transplant them singly into 2 or 2½-inch pots, using a light, rich soil. The object now is to make good, stocky plants, and they must therefore be repotted as often as the pots become tolerably filled with roots, until they are in 5 or 6-inch pots, when they may be allowed to flower.

Previous to this, any flower stalks that appear must be pinched out. In a suitable place the plants will do better out of doors than in the greenhouse during summer. They need a liberal supply of water. The plants will bloom continuously during the winter in either the greenhouse or a well-lighted sitting-room, not too warm; they should not be moved about often.

Cineraria.—Years ago the Cineraria was a popular plant among florists. Bedding plants crowded it aside, but it is now fast taking its proper place again among choice winter-blooming plants. It is, to be sure, a rather difficult plant to grow and bloom well if its requirements are not understood. The mistake generally made is in growing it in a warm house instead of a cool one. The seed should be started in the greenhouse. For winter blooming, sow the seed in April and May, in shallow boxes, in fine soil; drop the seed in shallow drills, cover, and press the earth rather firmly with a piece of board or the bottom of a pot. Set the box where it will get the morning sun, but be free from drip; water moderately and carefully. The treatment of the seedlings should be similar to that given to the Chinese Primrose. As soon as the plants are out of the seed-leaf, transplant singly into small pots, in a rich soil, with some vegetable mould in it. Repot as often as the pots become moderately filled with roots, or sufficiently often to prevent the roots from becoming pot-bound, and so avoid checking the growth. If specimen plants are wanted, the repotting should be continued until the plants are in pots from 8 to 10 inches in diameter. The last two pottings should be liberal ones, and drainage well provided for, as the plants will need copious waterings. When the flower stalks appear, manure water may be used once or twice a week. Aphis and red spider are the chief enemies to be guarded against; and this is best done by frequent syringings or sprinklings overhead. The plants will do best during the summer out of doors, in some place where they will not get too much sun, and be free from the drip of trees. In the fall the plants should be placed in a *cool* greenhouse, where the temperature can be kept low and the air moist. The plants should be placed on a table by themselves, and the pots *always* kept far enough apart to prevent the leaves in one pot from touching those in the next. In the winter it may be necessary to smoke the plants with tobacco occasionally, to keep down the "green fly," or aphis. This may easily be done with tobacco "stems," which can be had at slight cost; they can be burned on a shovel, or in a regular "fumigator," made for the purpose.

Calceolaria.—The herbaceous varieties of the Calceolaria are very beautiful and popular plants. They should be flowered in a cool greenhouse. The seeds are very small, and should be sown on the surface. Sow in shallow boxes, filled with a light, sandy soil, that has been sifted. Sow moderately thick in rows on the surface, and cover very lightly with sifted sphagnum moss, cocoanut waste or very light soil. Press the soil firmly on the seed. The watering should be done carefully; an atomizer or brush may be used to advantage. To retain the moisture, the box may be covered with panes of glass, which must be removed, however, as soon as the plants make their appearance. The box should have plenty of light, but not much sun. As soon as the plants can be handled, transplant singly into pots 2 to 2½ inches in diameter. The soil should be light and rich, and vegetable mould is an excellent addition. Repot as often as the pots are fairly filled with roots, and continue the repotting, if fine flowers are wanted, till the plants are in pots 8 inches in diameter. If the pots become root-bound the plants are apt to run prematurely into flower. Water regularly and abundantly, to prevent drooping. As the pots increase in size, drainage must be supplied to carry off the surplus water. Place in a *cool* greenhouse in the winter, as directed for Cinerarias, and keep the pots apart to prevent the leaves from touching. An occasional smoking with tobacco will keep down the green fly.

Pansy.—For spring blooming, the seed should be sown in August, September and October, in a coldframe with a southern aspect. Plenty of air and light is essential. During mild weather the sashes should be removed; when it is frosty, coverings are preferable to artificial heat. If wanted for winter bloom, sow in July, and as soon as large enough plant in beds or benches near the glass in the greenhouse, in a low and even temperature.

Geraniums.—The Scarlet or Horseshoe Geranium (or, more properly, Pelargonium), now so extensively used for bedding, may be easily grown from seed at any season of the year. If during the summer, better out of doors than anywhere else; but in a greenhouse or sitting room during the winter. Sow the seeds in pots or shallow boxes, in any common soil; cover about an eighth of an inch, and press the soil on the seed. Transplant as soon as out of the seed-leaf, into small pots, in a soil only moderately rich; or, if the seeds were started out of doors, the plants may be put in the border. Seed sown indoors in the fall or early winter, and the plants grown in the greenhouse, will show flowers in June or July, while plants from those sown in March or later will not come into flower till August and September, and some even later. Much, however, depends upon the treatment, those receiving special care in pots blooming much sooner than those turned into a border or bed.

Petunias.—Fill shallow boxes with fine, light soil, say an even mixture of leaf-mould and sand, and wet thoroughly by pouring on boiling water, which kills insects and heats the soil. When the soil has cooled sufficiently but is still warm, sow the seeds very thinly in the boxes, so that the plants may be 1 inch apart; cover seeds very slightly with a little sifted sand, and place slate or glass on top of the boxes. If the white root-points of germination appear before the leaves, sift on more sand and replace slate, and watch closely. When the small leaves appear, remove slate and give plenty of light, to produce strong, stocky plants. The soil may now need water, which should be applied very gently, that the tiny seedlings may not be displaced. Later the larger plants may be transplanted from seed boxes into other boxes or pots. As the weakest plants frequently give the finest blossoms, care should be taken to preserve every plant until the blossoms appear.

NASTURTIUMS.

Explanation of the Flower Seed Catalogue.

We have endeavored to make our flower seed department as complete in detail and easy of reference as possible, and, instead of the usual description, have adopted a system of classification in columns, using simple abbreviations to denote the various characteristics of the varieties in regard to color, time of flowering, hardiness, etc.

The **first column** gives the **NUMBER**, by which the different varieties may be ordered, without writing out the whole name.

The **second column** gives the **BOTANICAL NAME**, in Roman characters, and the following additional information:

The asterisk (*) designates *ornamental-leaved* plants; these plants are grown for their foliage.

The dash (—) designates the repetition of the name above it as applied to the variety to which the dash is prefixed.

in vars. designates *in varieties*, or in mixed colors.

fl. pl. designates *flore pleno*, or double-flowered.

The **third column** presents in figures the **COMPARATIVE TIME OF FLOWERING**. As it is impossible, in our varied extent of climate, to state the exact month any plant may flower in, we have adopted the simple plan of classing the different varieties into *early*, *intermediate* and *late*-flowering sorts. Thus:

1 designates *early*—blooming in spring and early summer.

2 designates *intermediate*—blooming in midsummer.

3 designates *late*—blooming in late summer and autumn.

The **fourth column** gives the **DURATION OR CHARACTER**, and **HARDINESS**.

A represents *Annual*—lasting but one year, and producing flowers and seed the same season.

B represents *Biennial*—lasting two years, and generally blooming during the second season.

P represents *Perennial*—lasting three or more years.

E represents *Evergreen*—retaining foliage the entire year.

S represents *Shrubs*—plants of bushy habit.

g represents *greenhouse plants*—such as do best when kept under glass.

bu represents *bulbous plants*—plants forming bulbs or bulbous roots.

.... designates, in every case, *repetition*.

But as a large number of Biennials and Perennials, if sown early, flower the first season, this distinguishing mark (†) is affixed to such.

The hardiness is denoted by the following abbreviations, but it should be understood that this is intended to apply to the climate of the Middle Atlantic states, and further north or south these designations apply only in a comparative way:

h represents *hardy*—plants for open border. hh represents *half-hardy*—plants that require to be forwarded in pots or frames. t represents *tender*—requiring protection.

The **fifth column** gives the **COLOR** in full, except as abbreviated below:

ap. for apetalous
blk. " black.....
br. " brown.....
tri. " tricolor.....

bff. for buff.....
car. " carmine.....
cr. " crimson.....
sul. " sulphur.....

lav. for lavender.....
ptd. " painted.....
pur. " purple.....
var. " variegated.....

scar. for scarlet.....
spot. " spotted.....
stri. " striped.....
ver. " vermillion.....

The **sixth column** gives the height in feet to which the plants grow under ordinary cultivation: *trai.* signifies *trailing*; *cr.* stands for *creeping*.

The **seventh column** shows the price per packet at which the flower seeds will be delivered by mail to any post office.

The **eighth column** gives brief observations respecting the various classes of plants catalogued, with special directions respecting their culture, where required. As these notes have been very carefully prepared, their suggestions are worthy of attention.

FLOWER SEEDS.

For Seeds of Running Vines, Gourds, Everlastings and Ornamental Grasses, see end of Flower Seeds.

Flower Seeds delivered free by mail on receipt of the stated price.

See explanation of figures and signs, on page 80.

choicest double sorts. The special attention given of late to the cultivation of the Aster has resulted in the production of many truly magnificent varieties. Among them we may mention the *Victoria*, which produces the most beautiful and perfectly-formed flowers, and is also the best for pot culture. For cutting and bunching, the long-stalked, perfectly globular flowers of the *Jewel* are especially desirable. The *Truffaut* class is remarkable for its large, incurved flowers and the brightness of the colors. The *Japanese Tassel* Aster is a very distinct new variety, with long, wavy petals and flowers of immense size. The *Lady Aster* is of most graceful habit, with light green distinct foliage. It is extremely floriferous. The *Ostrich Plume* is a magnificent pure white new variety, in style of the *Giant Comet*. In this latitude Asters should be sown from the middle of March to the first part of May, on a spent hotbed or in pots or shallow boxes, in a frame or in the house. When an inch high, they should be transplanted into fine soil spread over a discarded hotbed, whence they can be bedded out when 3 or 4 inches high. This should be done before or during showery weather. Asters do finely sown in the open ground from the middle to the last of May, but bloom quite late. They can also be well grown in pots; use fine and rich soil, and water well.

COLLECTIONS.

We invite careful attention to the collections offered below. These are put up in Germany, and contain only seed saved from the very finest plants. In each collection the colors are separate; for instance, the collection of 24 Truffaut's *Pæony Perfection* contains 24 separate and distinct colors or varieties of the class.

2530	<i>Campanula carpatica</i>		1	hP	blue	$\frac{1}{2}$	5	} (Canterbury Bells.) One of the best known plants grown in the garden. The hardy perennials, if sown early in good soil, will bloom early the next season. The first two on the list are very fine for edgings and beds. All the varieties are fine old plants, and should be grown extensively. <i>C. macrostyla</i> has large, lovely violet flowers. <i>C. persicifolia</i> , Blue and White, are splendid perennials, with superb, large flowers. A fine effect is produced by planting the blue and white varieties together. The dwarf varieties are excellent for rockeries or the fronts of borders. They prefer rich, sandy soil with good drainage.

2597	Margaret, White.....	2 3	thhP	white	1 1/2	10	Saved from the finest collections of Germany and France. Grown in pots and in good soil, no flowers can be finer or more desirable. Are very fragrant, and present great diversity and brilliancy of coloring. The culture of seedlings is very interesting. The half dwarf "Margaret" is especially adapted for outdoor culture, flowering in five months from time of sowing, and is remarkable for the richness and profusion of its flowers, as well as for its vigorous growth. It is also suitable for pot-culture, flowering the first season from seed. Our seed of these varieties is grown exclusively by Mr. Chabaud, in the famous Garden of Carnations, Provence, France.

Cosmos, Large-flowered—								
2386	Giant Fancy White	2 3	white	3	15	The Cosmos has been so much improved in recent years that it is now one of our finest and most popular autumn-blooming flowers. Start the seeds early inside and transplant to open ground in May. The "Giant Fancy" strain produces flowers of immense size, often over 5 inches across, and in great diversity of form and coloring. "Tints of Dawn" are white ground, flushed pink, and exquisitely beautiful. The "Marguerite" has deeply and irregularly fringed petals resembling Marguerites.

3752	Pansy , *Black "Faust" .. oz., \$1.25	1 3	hA	black	1/2	10	(Viola tricolor; Heartsease.) Most of the varieties are saved from fine, choice flowering plants. They cannot be surpassed in color or blooming qualities. They should be carefully culti- vated, and will richly pay for good treatment in their large flowers and foliage. The seeds should be sown early in autumn, if large flowers are expected, and preferably in a frame. If sown in spring, the flowers will not be as large as from seed sown in autumn. No. 3757 is a new variety, with large peacock- blue flowers, edged with white. No. 3766 has exceedingly beau- tiful, extra large flowers, with very broad blotches and upper petals finely lined. No. 3775 is a new French variety of a dis- tinct mauve color. "President Carnot" has pure white petals each with a deep violet blotch. It is a strikingly beautiful new variety. No. 3786 is the richest and most choicely varied mix- ture ever offered. It produces only the handsomest colors and finest forms, and these in great diversity. The collections here offered merit special attention, and are sure to give splendid results.

	Petunia hybrida —						These are well-known, very ornamental plants, producing freely fragrant and beautiful flowers, and continuing a long time in bloom. They do well in the garden, house or conservatory, and will thrive in almost any sort of soil. The newer varieties are of brilliant colors and fine form. "The Rainbow" has richest colorings, with intense yellow throats. "Ring of Emerald" has large pink and crimson flowers, bordered with green. The "Ruffled Giants" are new, extra large-flowered sorts, beautifully ruffled, fluted and fringed. 3867 is a dwarf, bushy variety, with regularly striped flowers, and is very effective, either in masses or in pots. "Thorburn Superb Giant" is a strain of great merit. The flowers are very large and extremely deep-throated; some of them are exquisitely penciled and beautifully fringed. The collections of Large-flowering and Double Fringed here offered contain only the finest varieties.

	Phlox Drummondii —						The name is from <i>phlox</i> , flame, in allusion to the general brilliancy of the flowers. This is a very elegant genus of flowering plants, being highly colored, especially <i>P. Drummondii</i> , an annual, the varieties of which are of the brightest colors. A bed of these will be highly prized for good habit, richness of color and duration and profusion of bloom. All grow well in pots or as trailers. By making two or more sowings, they will flower till frost. Should be grown in rich, loamy soil, and

	Pink (<i>Dianthus</i>)—						
3963	<i>Chinensis</i> Double Mixed..oz., 40c.		thB	1	5	(Dianthus.) Beautiful and ornamental genus; for beauty and sweetness contains some of the most prized flowers we possess. The leaves of the hardy perennials are green all winter. Many can be grown in pots and kept in the house. No garden should be without some of the varieties of the <i>Dianthus</i> family, which for color and fragrance cannot be surpassed. They succeed well in any fairly rich soil, but when the production of large flowers is aimed at, a bed of turfy loam, leaf-mould and well decomposed manure should be specially prepared for them. No. 3989 is the very finest strain of the double Scotch or Florists' Pink.

4067	Portulaca splendens.....	2 3	tA	crim.	1/2	5	These cannot be rivaled for the brilliancy and delicacy of their colors, and are very effective in beds, edgings or rock-work. The last eight have double flowers, and are very beautiful, many of them resembling miniature-roses. The seed of these always contains many single flowers, which bloom earlier than the double ones, and may in this way all be pulled out before the double ones come into flower. Portulacas bloom best in a light, sandy soil. They will not germinate till hot weather sets in, and seed should, therefore, be sown late.

4156	Primula Sinensis fimbriata rubra..		gP	fr. red	3/4	25	From <i>primus</i> , first, referring to their early flowering. The Chinese Primroses (<i>Primula Sinensis</i>) are fine for winter and spring blooming; they are free-flowering, and especially valuable for cut-flowers or for house and window culture; a cool place suits them best. The seed is saved from the finest colors and largest flowers. The seed should be sown in light soil, but for the final potting a richer soil is necessary, consisting of two parts loam to one each of well-decayed manure and leaf-mould. They require to be well ventilated, well watered and slightly shaded throughout the summer. The collections here offered contain the finest varieties grown.

Stocks, German Ten Weeks—							
4528	Dwarf Snowflake Forcing.....	1 2	hhA	white	1	25	<p>(<i>Mathiola</i>.) These seeds are saved from the finest double varieties. Unsurpassed for bedding, massing, edging or pot-culture, being very free and long bloomers, and of much diversity and brilliancy of color. They are also very attractive in form, and richly fragrant. The double white sorts are largely used in summer for bouquets and floral work. In this latitude Stocks should be sown from the middle of March to the first part of May, on a spent hotbed or in pots or shallow boxes, in a frame or in the house; and when an inch high, they should be transplanted into fine soil, which should be spread over a discarded hotbed, whence they can be bedded out when three or four inches high; this should be done before or during showery weather. Transplanting several times in the early stages of growth tends to give them a more compact and dwarf habit. Stocks do well sown in the open ground from the middle to the last of May.</p> <p>For choice collections of Stocks, see below.</p> <p>("Bird of Paradise Flower.") Magnificent greenhouse perennials.</p> <p>Very ornamental, profuse blooming greenhouse plants.</p> <p>Bell-shaped flowers, followed by white berries. Fine.</p> <p>(<i>Centaurea</i>.) Pretty border annuals, with long stems and fragrant flowers. Do not transplant. Fine for cutting.</p> <p>Derives its name from the popular supposition that its large heads of flowers follow the sun in its course. Showy for backgrounds and shrubberies. Like the Eucalyptus, good to absorb the miasma of low grounds. The large flowers are very rich and effective. No. 4589 has silvery foliage and very handsome small flowers.</p>

	Zinnia , Double—						
4698	Tall Carmine.....per oz., 40c.	hA	car.	5	} Fine bedding and border plants, blooming long and abundantly. Beds of these are greatly admired. The colors are varied and bright and the plants easily grown. Should be more extensively cultivated, as the varieties have been much improved of late. 4721 and 4721a are very dwarf double varieties, forming compact, free-flowering bushes; fine for edgings. 4714a has most magnificent, extra large blossoms of rich scarlet. 4723 is a splendid new variety, most gracefully curled and crested. The collections here offered will be found very choice, and are sure to give satisfaction. Zinnias succeed best in a rich, deep, loamy soil and in a sunny situation.

Van Dyck. Crimson-amaranth, striped with white; very fine.....	10	1 00		
Virginalis. Pure white, bordered and flamed with carmine.....	10	1 00		

NEW GIANT CHILDSI GLADIOLI.

These are much more vigorous than others. They are very tall and erect, often standing 4 or 5 feet high, with spikes of bloom over 2 feet long. The flowers are of great substance and of gigantic size, frequently 7 to 9 inches across. Every color known among Gladioli is represented, and many never before seen, particularly blues, smoky grays and purple blacks, all having beautifully mottled and spotted throats, made up of white, crimson, pink, yellow, etc.

Brilliant. Beautiful orange-red, with carmine and white throat.....	Each	Doz.		
	per 100, \$0 20	\$2 00		
Boston. Flaming orange-scarlet, with large, pure white, violet mottled throat..	10	1 00		
Columbia. Light orange-scarlet, freely blotched and penciled with bluish purple.	05	40		
Dr. Sellow. Large spike and very large flowers of great substance. Deep, rich, rosy crimson, slightly penciled darker. Throat pure white, mottled and spotted..	10	1 00		
Hohokus. Large, flaming crimson, with bright magenta mottled throat.....	30	3 00		
Livonia. Light red, with white mottled throat.....	10	1 00		
Mrs. Beecher. Deep rosy crimson; pure white throat, marked bright carmine....	Each	Doz.		
	\$0 10	\$1 00		
Nezinscott. Bright blood-scarlet, with deep, velvety crimson-black blotches, white mottling in throat.....	10	1 00		
Savannah. Deep blood-red, with white mottled throat. Makes a splendid spike..	20	2 00		
Sacramento. Deep, bright coral-scarlet, with clear and distinct white mottlings in throat.....	20	2 00		
Splendor. Rose-magenta stain, with purple and white mottling.....	25	2 50		
Torch Light. Light flaming scarlet flowers. Throat mottled white and violet....	10	1 00		

MONTBRETIAS.

Hardy, summer-flowering, bulbous plants, with brightly colored flowers borne on long, graceful spikes. Valuable for cutting. They should be planted in groups and left undisturbed.

	Each	Per doz.	100		Each	Per doz.	100

Eldorado. Large, golden yellow flowers; very floriferous; dwarf..	08	75	4 00	Rosea. Distinct new variety from South Africa. Salmon-rose color.	08	75	4 00

DWARF FRENCH CANNAS.

Price of all these Cannas, 15 cts. each, \$1.50 per doz., \$10 per 100.

QUEEN CHARLOTTE.

Austria. Pure canary yellow; fine large open flowers, with but few traces of the reddish brown in the center of the two inside petals.

Alphonse Bouvier. Although introduced in 1891, it still stands at the head of tall crimson varieties. A strong grower, with bright green foliage. Very floriferous, and under fair conditions grows 6 to 7 feet high.

Alsace. Pale sulphur-yellow, changing to creamy white. $4\frac{1}{2}$ feet.

Beaute Poitevine. An excellent free-flowering crimson that is especially valuable in a hot, dry season, succeeding better under those conditions than any other variety. 15 cts. each, \$1.50 per doz.

Charles Henderson. A grand variety of a fine crimson color that has become very popular. While it is not quite as rich in color as Alphonse Bouvier, its habit of growth is much more compact, rarely exceeding $3\frac{1}{2}$ feet in height, which makes it a desirable companion to such varieties as Florence Vaughan and Madame Crozy.

Egandale. A most excellent variety, with bronzy foliage and soft currant-red flowers, which are thrown well above the foliage; the best of its type; attains a height of about 4 feet.

Florence Vaughan. Undoubtedly one of the finest yellow spotted varieties yet sent out; in color it is of a bright rich golden yellow, spotted with bright red; the flowers, which are of the largest size, of great substance and of perfect form, are borne in large heads and in the greatest profusion; the foliage is massive and of a rich green color; the plants rarely exceed $3\frac{1}{2}$ to 4 feet in height.

Furst Bismarck. Rich scarlet-crimson, but so distinct from all other crimsons that it can be planted along with them in perfect harmony of color. The flowers are of large size, with broad petals of good

substance, and produced in immense trusses; of vigorous, compact, uniform growth, about $3\frac{1}{2}$ feet high.

F. Neuvesel. This is a splendid sort of a soft, pleasing shade of carmine; of good size and excellent habit, the foliage is dark green with bronzy markings; it is of strong, robust habit, growing $4\frac{1}{2}$ feet high. Very effective.

Italia. Is of a bright orange-scarlet, with a very broad golden yellow border; the flowers, which are produced on massive stems about sixteen inches long, are set well above the foliage; the foliage is large and heavy, similar to that of *Musa Ensete*. One of the best sorts.

Madame Crozy. The flowers of this well-known and popular variety are of a bright crimson-scarlet, bordered with golden yellow. The plant is of vigorous growth yet dwarf in habit, rarely exceeding 4 feet in height. Foliage bright green, and very massive. The flowers are produced on large, branching stems which are closely set with bloom, each stem being really a bouquet in itself.

Mad. Leon Leclerc. Entirely distinct ground color, being a bright orange-scarlet with a heavy tip and narrow margin of yellow. 5 feet.

Papa. A fine red, with large flowers and truss. $3\frac{1}{2}$ feet.

President McKinley. Color brilliant crimson, with bright scarlet shading. Truss large, compact, of good shape, held well above the foliage, and produced freely and evenly. Plant is dwarf, 3 feet; foliage deep green, with marked chocolate margin. It is

one of the earliest bloomers, coming into flower when from 14 to 18 inches high, and blooming continuously thereafter.

Queen Charlotte. The finest of all the gilt-edged varieties. The plant attains a height of about 3 feet and is furnished with heavy bluish green foliage; the enormous flower spikes, towering grandly above the foliage, bear a beautiful bouquet of large flowers of perfect form, with petals of a rich scarlet-crimson, broadly banded with bright canary yellow. 3 feet high.

Souvenir du President Carnot. Bronze foliage. 5 ft.

Sunray. An entirely distinct striped variety. The flowers are of large size, open out well, and are produced very freely. The ground color is a rich bright yellow, with stripes and dashes of bright scarlet running through almost to the edge of the petals, producing a unique and bizarre effect.

Sam. Trelease. The greatest merit of this variety is that the flowers open out flat, which, with its very broad petals, which are of good substance, makes a large, nearly perfectly circular flower, different from all other sorts. In color it is the nearest approach to a pure scarlet yet introduced. Very rich and glowing; the edges and center are marked with yellow, about the same as in Mme. Crozy. About 3 feet high.

Souvenir d'Antoine Crozy. The richest gilt-edged variety yet introduced; the flowers are large, with well-rounded petals, which are of intense scarlet-crimson, rich and dazzling, and are bordered with a broad, rich golden yellow band; in habit the plant is all that could be desired, being of strong, vigorous, but dwarf habit, forming symmetrical compact plants about 3 feet high.

Vice-President Luizet. Carmine, large flower. $3\frac{1}{2}$ ft.

FINE DOUBLE DAHLIAS.

NYPHÆA.

SHOW AND FANCY DAHLIAS.

	Each	Doz.
Storm King. This superior variety is an extremely early, profuse and constant bloomer, a strong, vigorous grower of dwarf, branching habit, and produces its flowers on long stems. The flowers are snow white, of perfect form, and full to the center.....	\$0 30	\$3 00
